The Space group in ASD

facts & figures 2024

Press Release

Introduction

The 29th edition of the annual facts and figures report is published in July 2025.

- The 2025 report is available for free to selected institutional contacts, to Eurospace members and to all the companies that have supported the survey.
 - *All others will find on www.eurospace.org the 2024 edition for free download.*
- Main findings:
 - Employment still in growth at 66k FTE +4%
 - Final sales rebound to 8,8B€ +3%
 - **Productivity still in decrease**

Employment (FTE) and sales (M€)	2022	2023	2024
Direct industry employment (FTE)	57902	63402	66061
Other personnel working on site (FTE)	2182	2192	2396
Total space industry employment (FTE)	60084	65594	68457
Final sales (M€ current e.c.)	8345	8570	8835

Survey statistics	Nb of units	Final sales M€	Employment
All units in the model	742	8835	66061
Units updated	387	7878	52507
Proxies	355	956	13554
Survey representativeness	na	89%	79%

Key trends – European space industry

Employment and consolidated sales rebound

- 66k FTE (+4%) with contrasting trends:
 - Startups 'explosion' vs Large Groups receding
- 8,8B€ (+3%)
 - Sales growth supported by European institutional demand
 - Commercial segment still receding
 - Equipment Exports stable
 - Launcher programmes uptake

European industry economic fundamentals are worrying

- Sector profits are at an all time low
- Sector productivity receding
- Sector overcapacity is looming
- Sector cohesion is low

Market prospects exhibit diverging trends

- Commercial (accessible) demand at all time low
 - The promise of the Newspace is not (yet) realised
- Most growth potential driven by institutional programmes (captive demand)
- European institutional cohesion is weakening
 - National interests prevail

Global context

Macro trends in space infrastructure markets

Space infrastructure market metrics

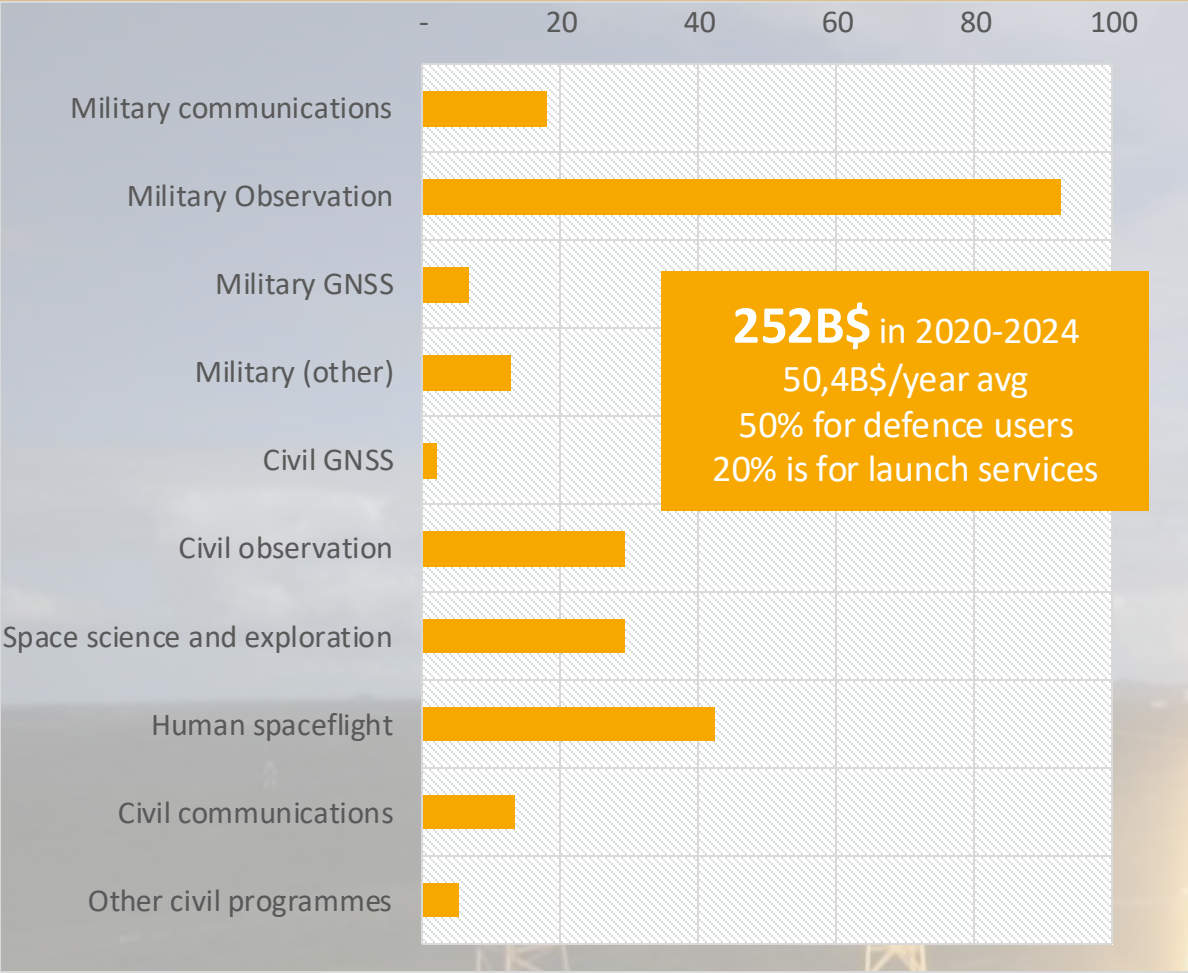

- Government programmes have a much higher value than commercial programmes
- Commercial programmes growth (in numbers and mass) does not produce major growth in business

Space infrastructure financing: Total Capex estimates

2020-2024 by application segment – Source Eurospace LEAT database

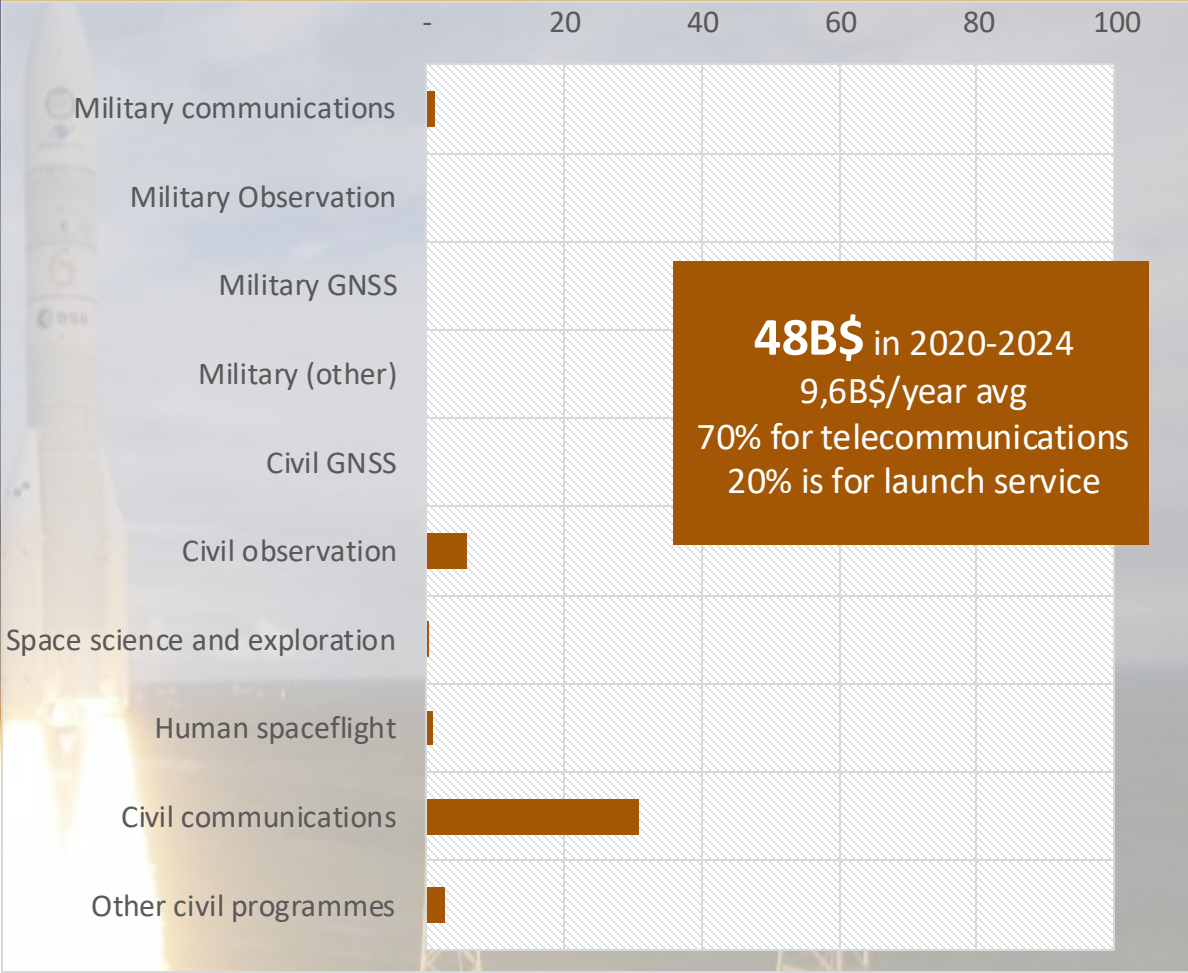

Government funded (B\$)

Space segment + Launch service

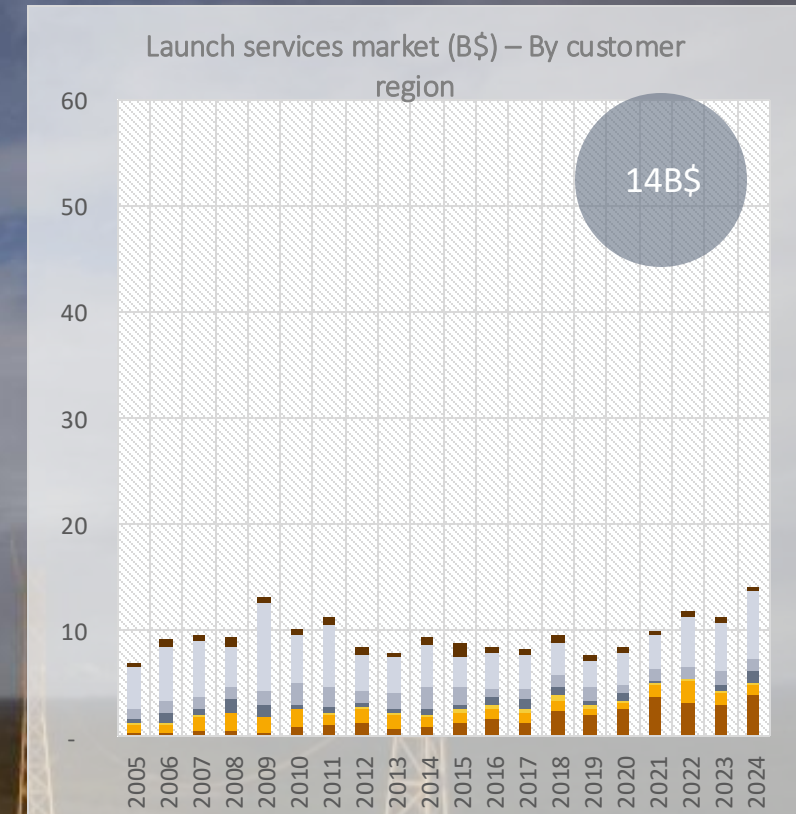

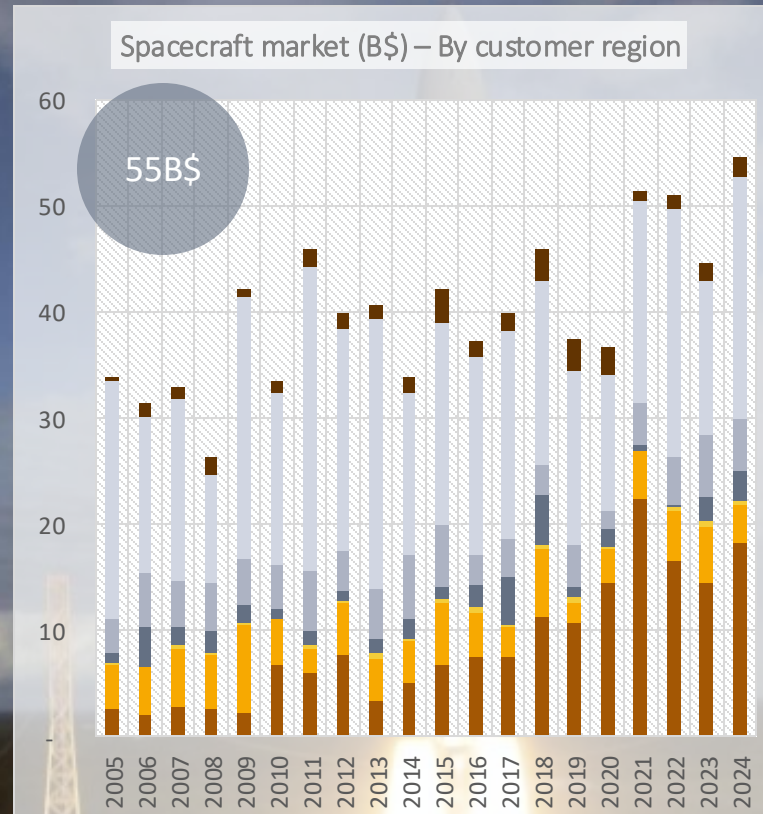

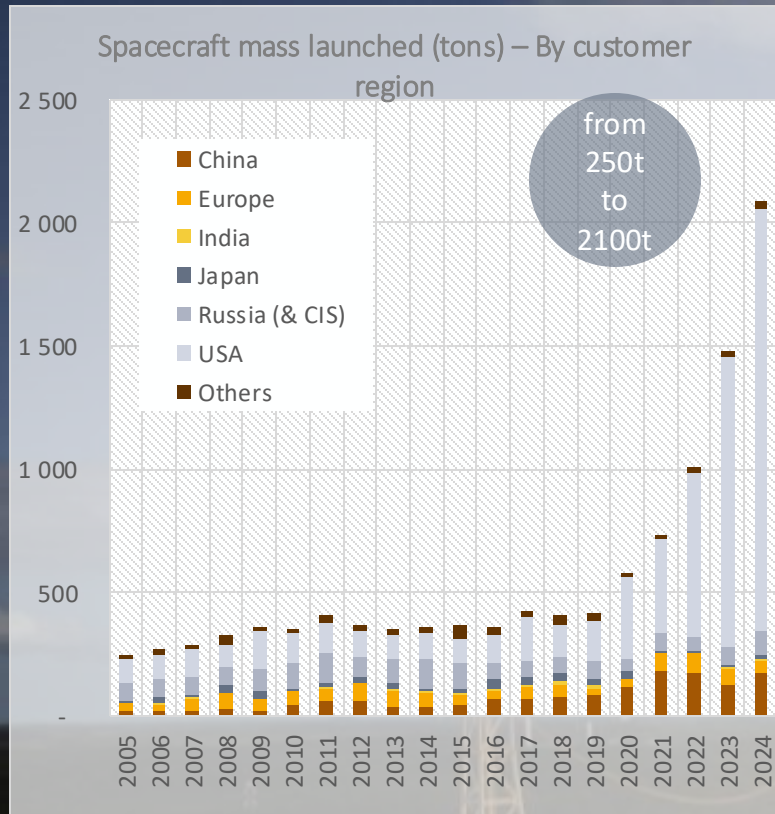

Privately funded (B\$)

Space segment + Launch service

Global infrastructure demand

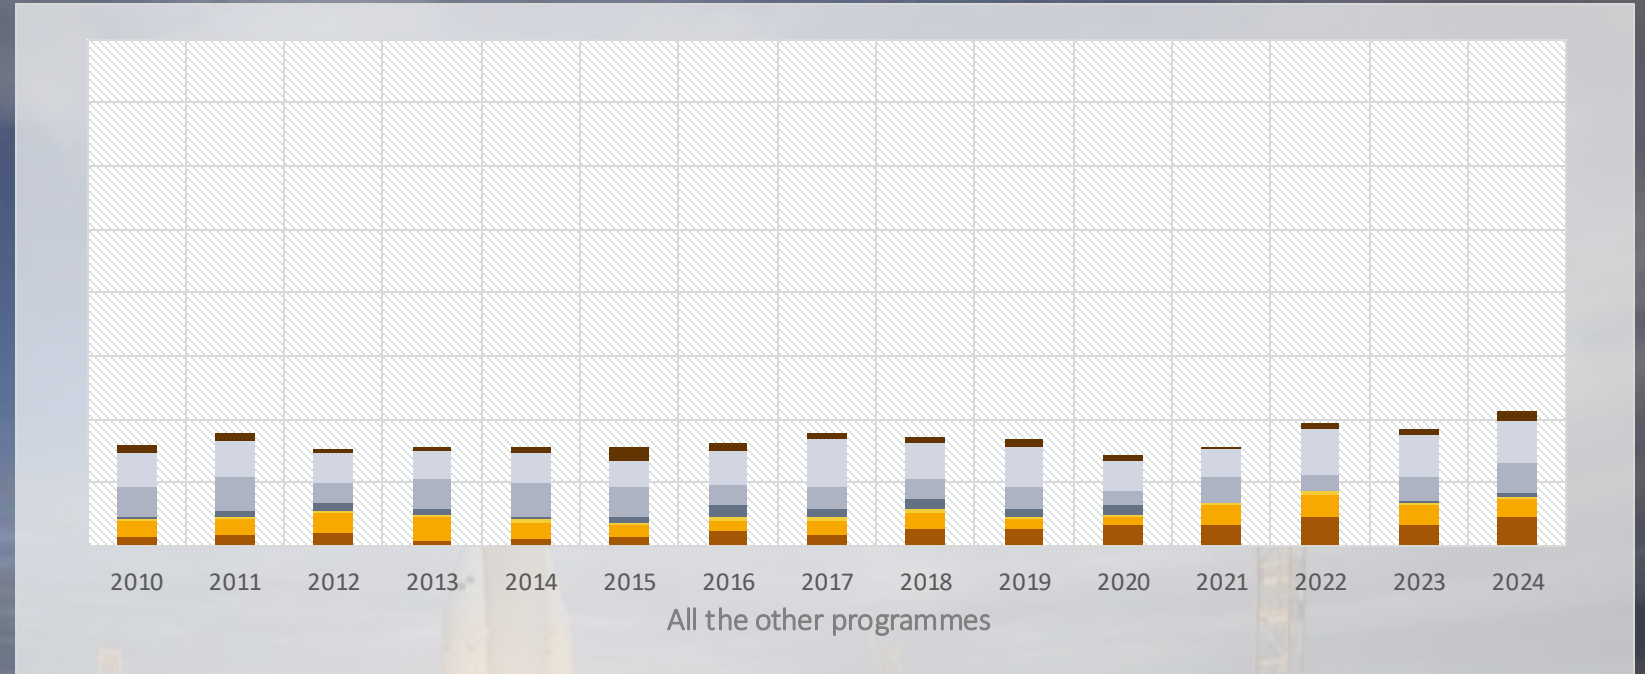

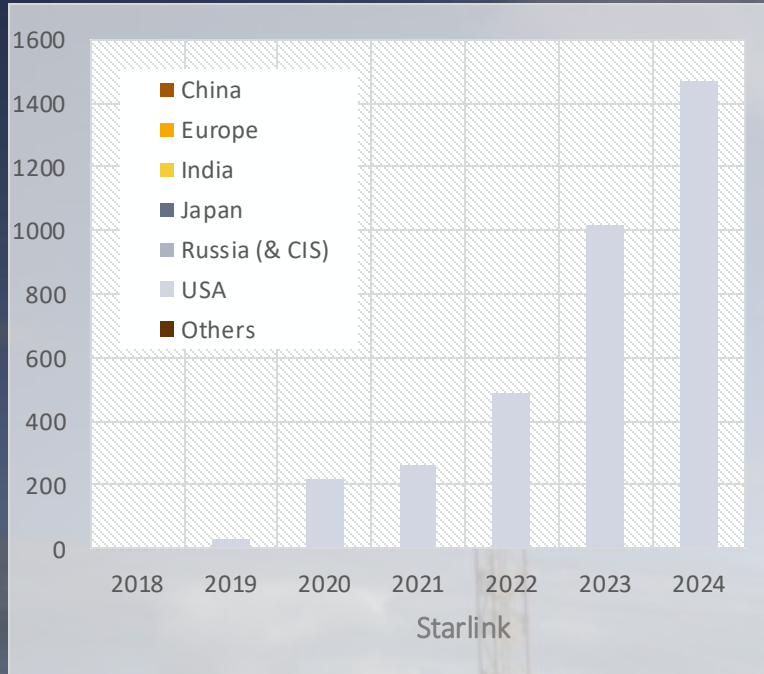

Definition: The demand for building and launching satellites and other spacecraft (not included the R&D funded by space agencies)

- Global spacecraft market: 55B\$ -- Global launch market 14B\$ -- moderate growth trend
- Most of demand (85%) comes from China and the USA – Most of the growth (in value) is driven by China

The Starlink disruption

(mass in tons)

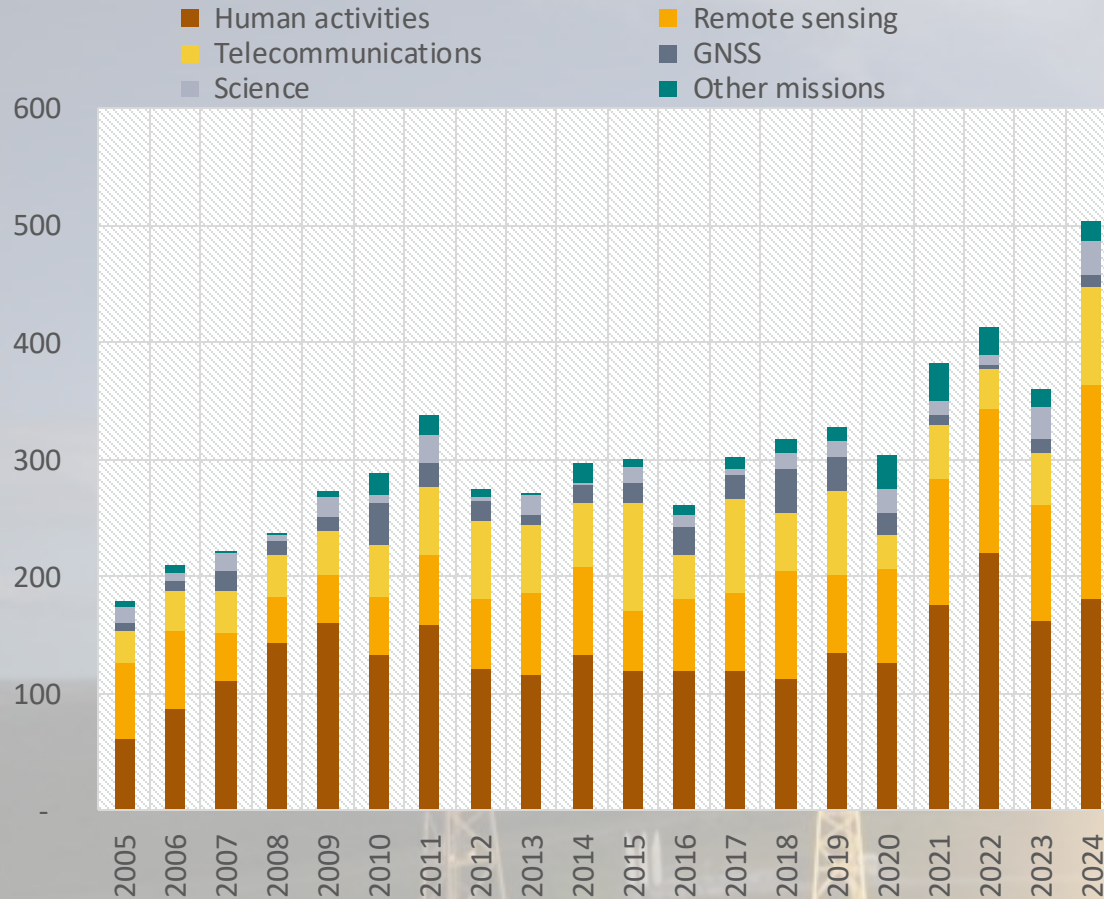

- The Starlink constellation radically modified launch mass statistic in the past 4 years, breaking every year a new record in launched mass.
- The only measurable growth (apart Starlink) is associated to the **Chinese space programme (4x in 10 years)**.

Key trends in institutional programmes

Institutional Spacecraft demand – in Mass

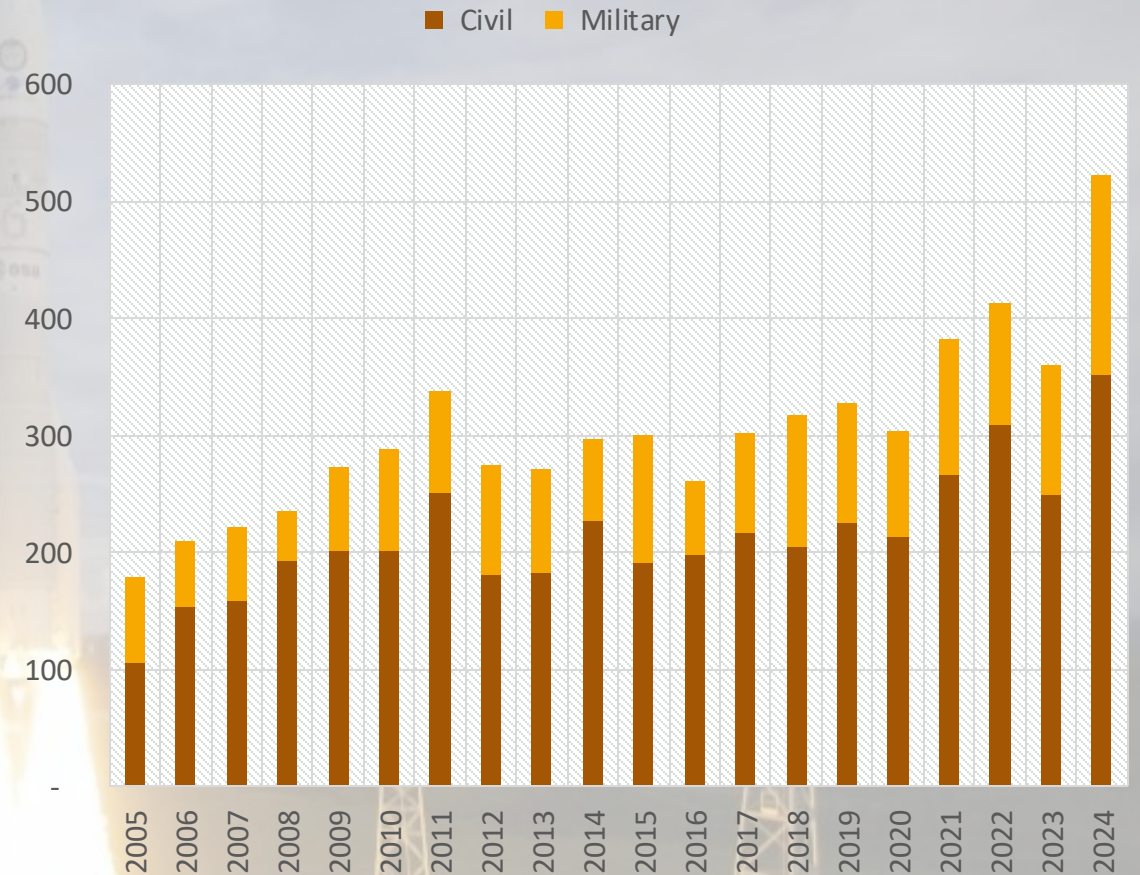

Institutional spacecraft mass (tons)

By mission

Institutional spacecraft mass (tons)

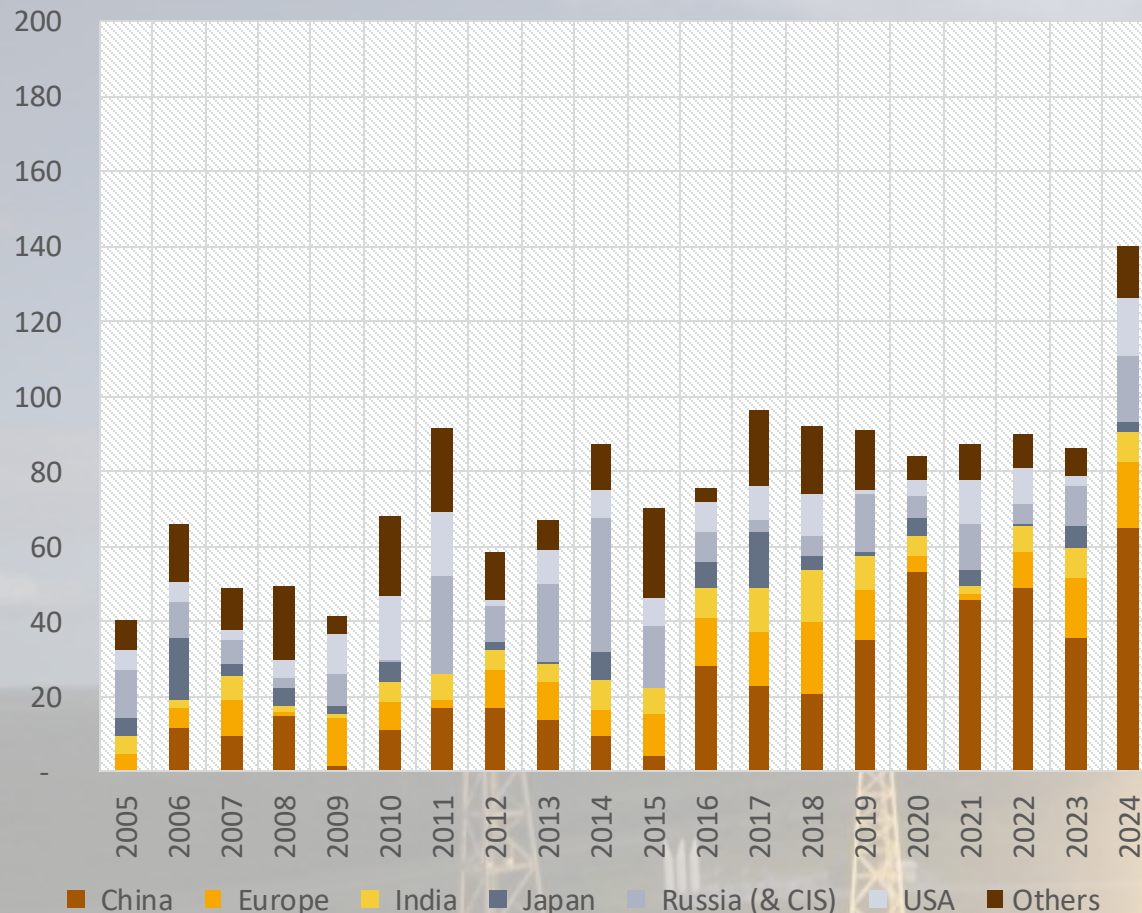

Civil vs. Military programmes

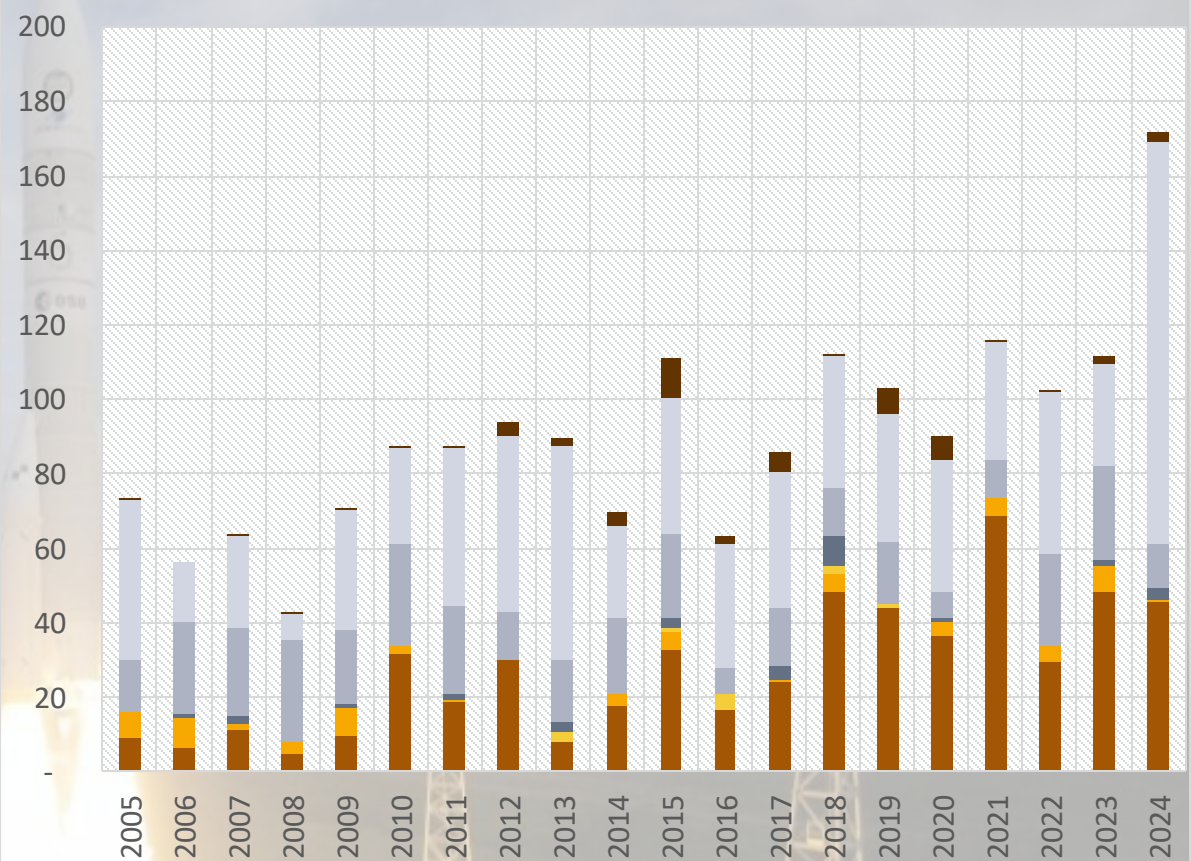

Key trends in institutional programmes

Institutional Spacecraft demand – in Mass – Human spaceflight excluded

Civil institutional programmes
by customer region (tons)

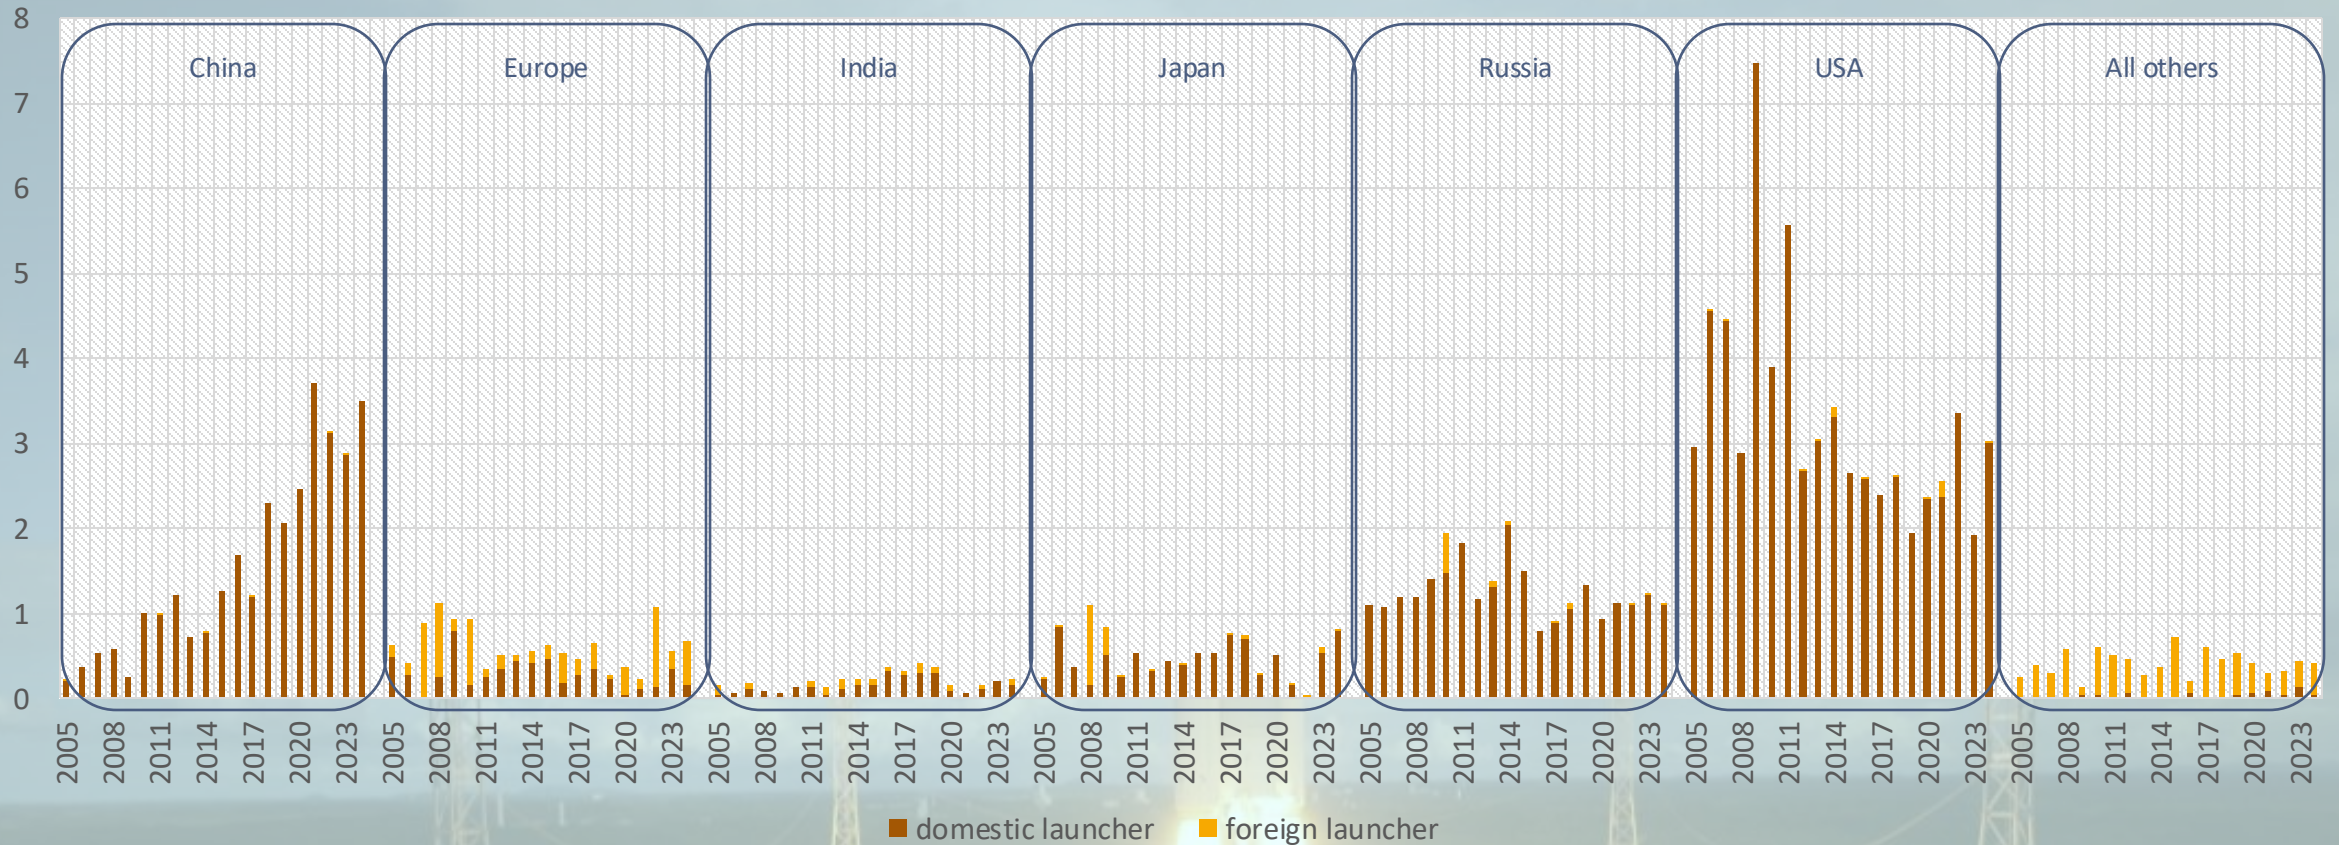

Military institutional programmes
by customer region (tons)

Key trends in institutional programmes

Institutional launch demand – in \$ Billion

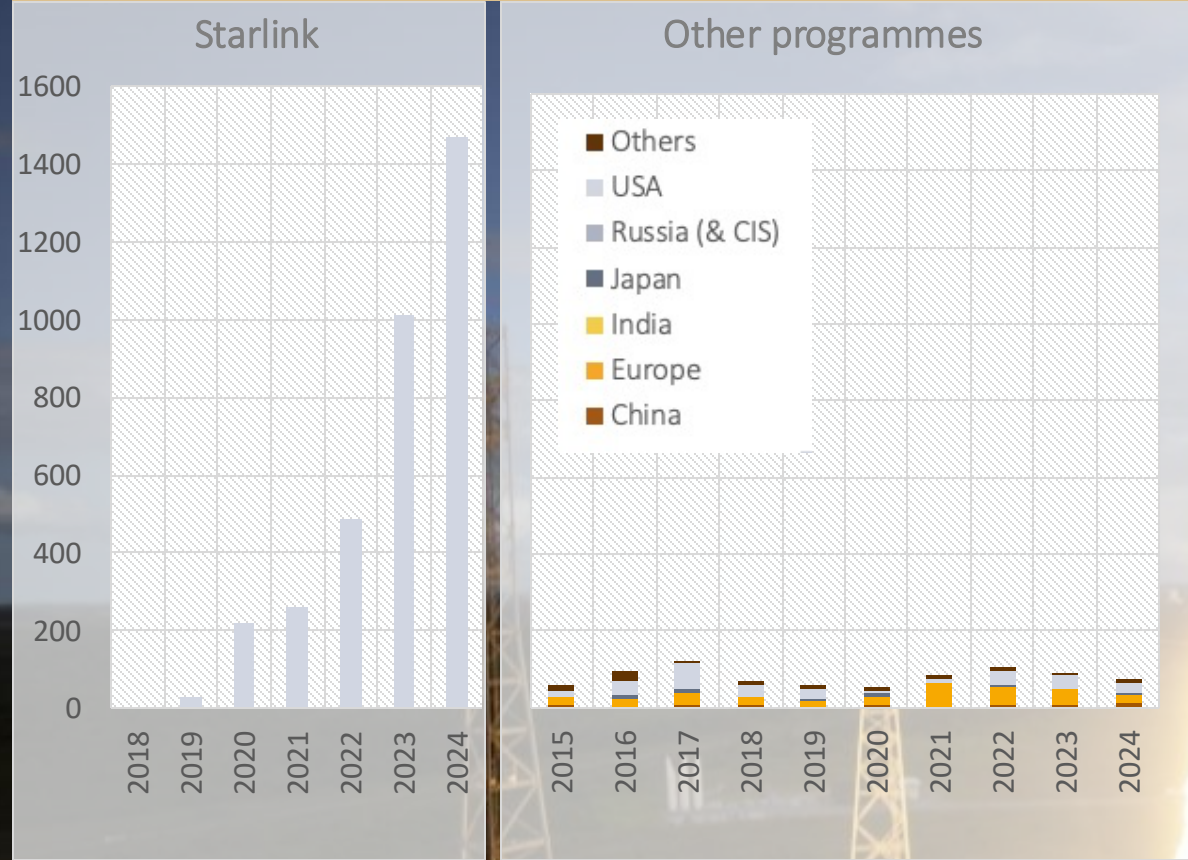

The USA and China have the highest institutional launch demand:
2-3B\$/year
Most of it served by domestic launchers

The European institutional launch demand is between 300 to 500M\$/year
Domestic preference is not always possible/enforced

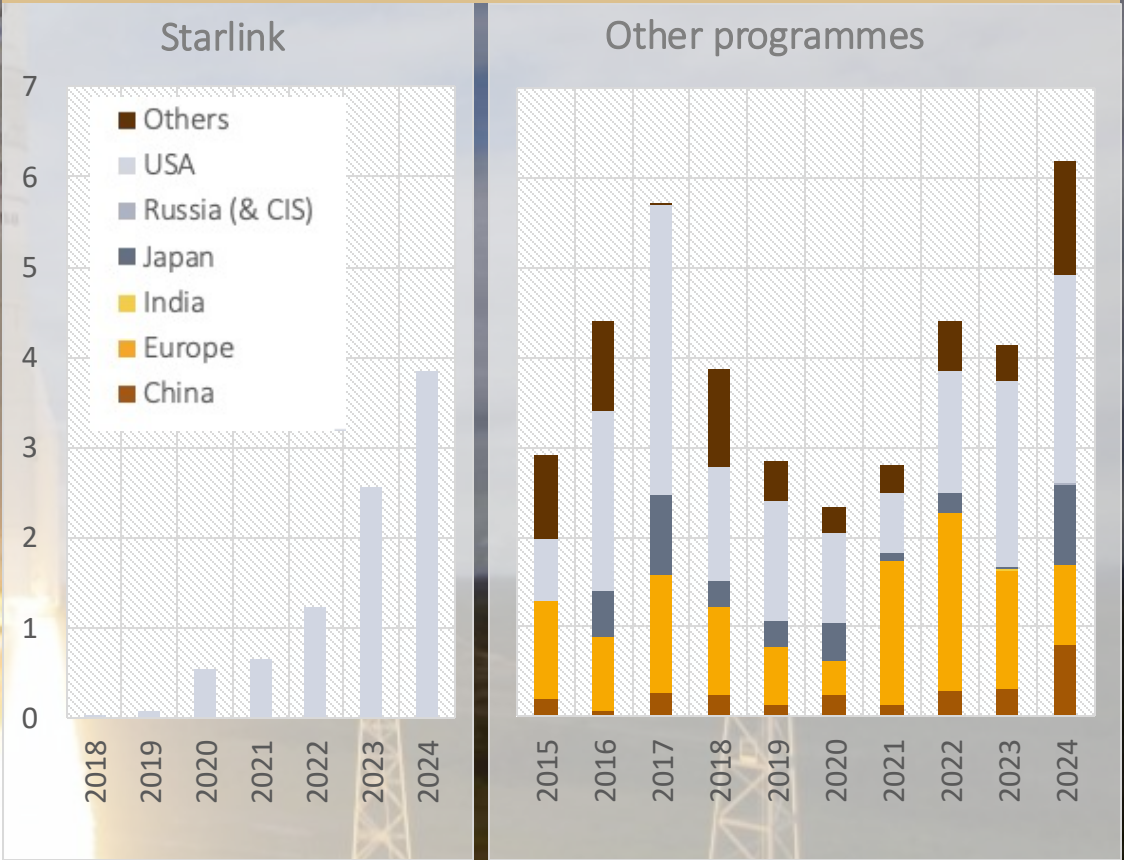

Spacecraft trends in commercial programmes

Overview by customer country – Spacecraft trends - Starlink on the side

Commercial programmes – Mass trends (tons) by customer region

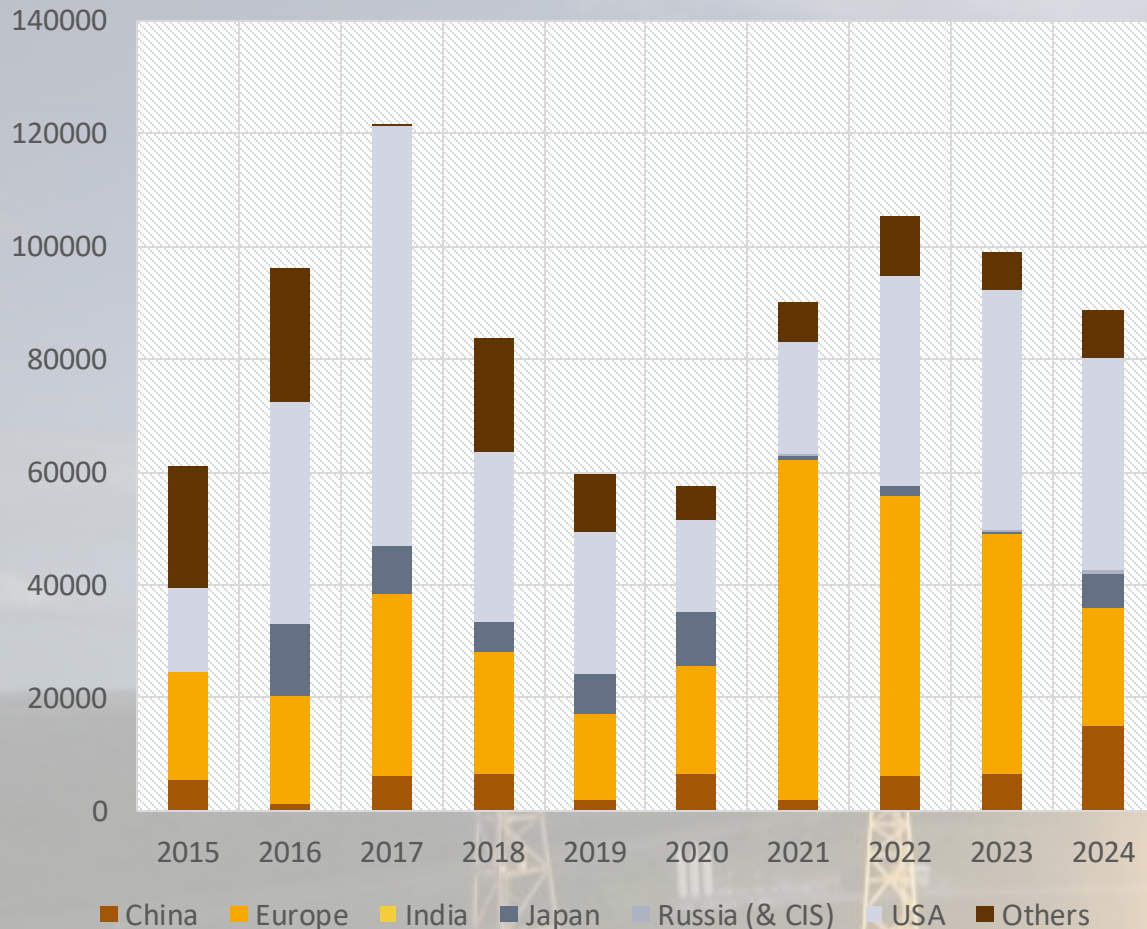

Commercial programmes – Market trends (B\$) by customer region

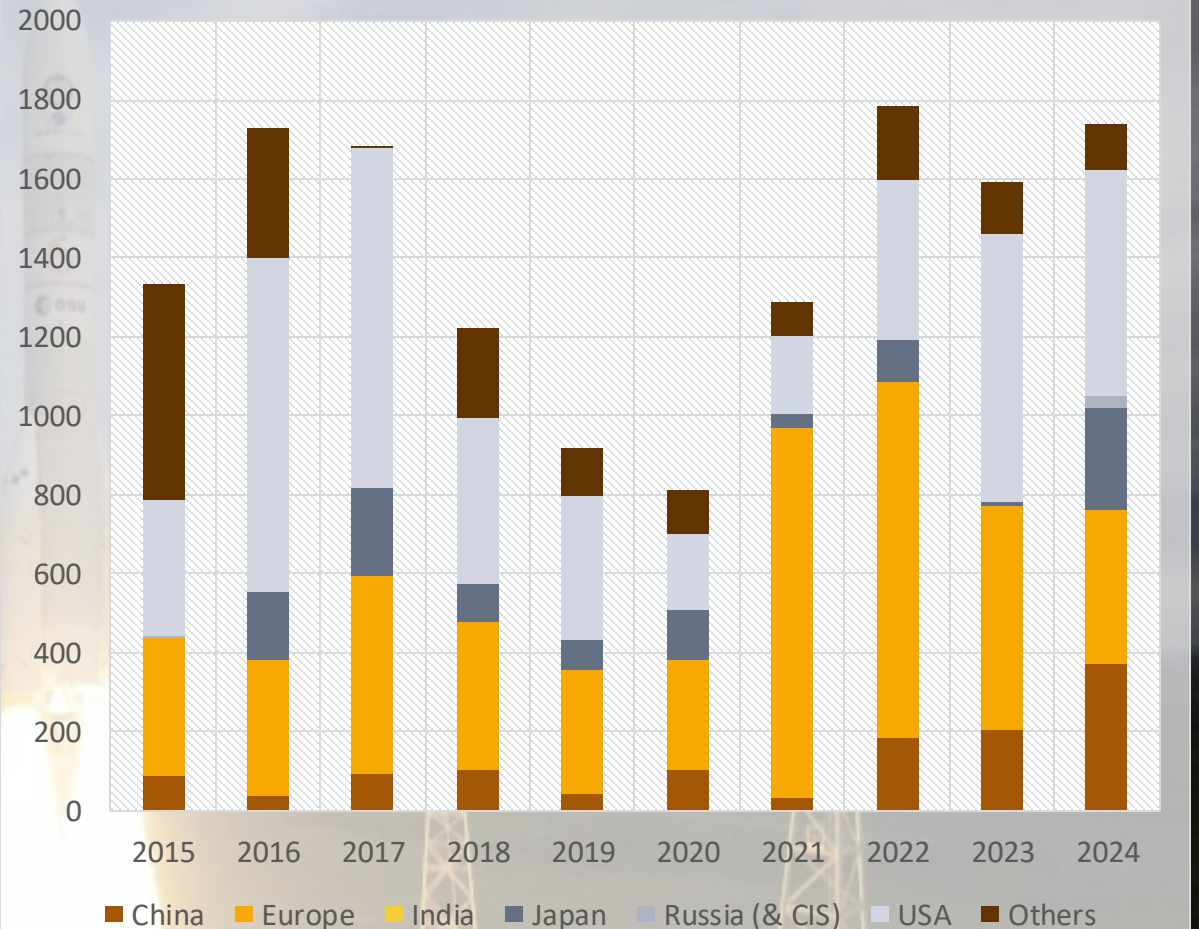

Launch trends in commercial programmes

Overview by customer country – Launch demand - Starlink excluded

Commercial programmes – Mass trends (tons) by customer region

Commercial programmes – Market trends (B\$) by customer region

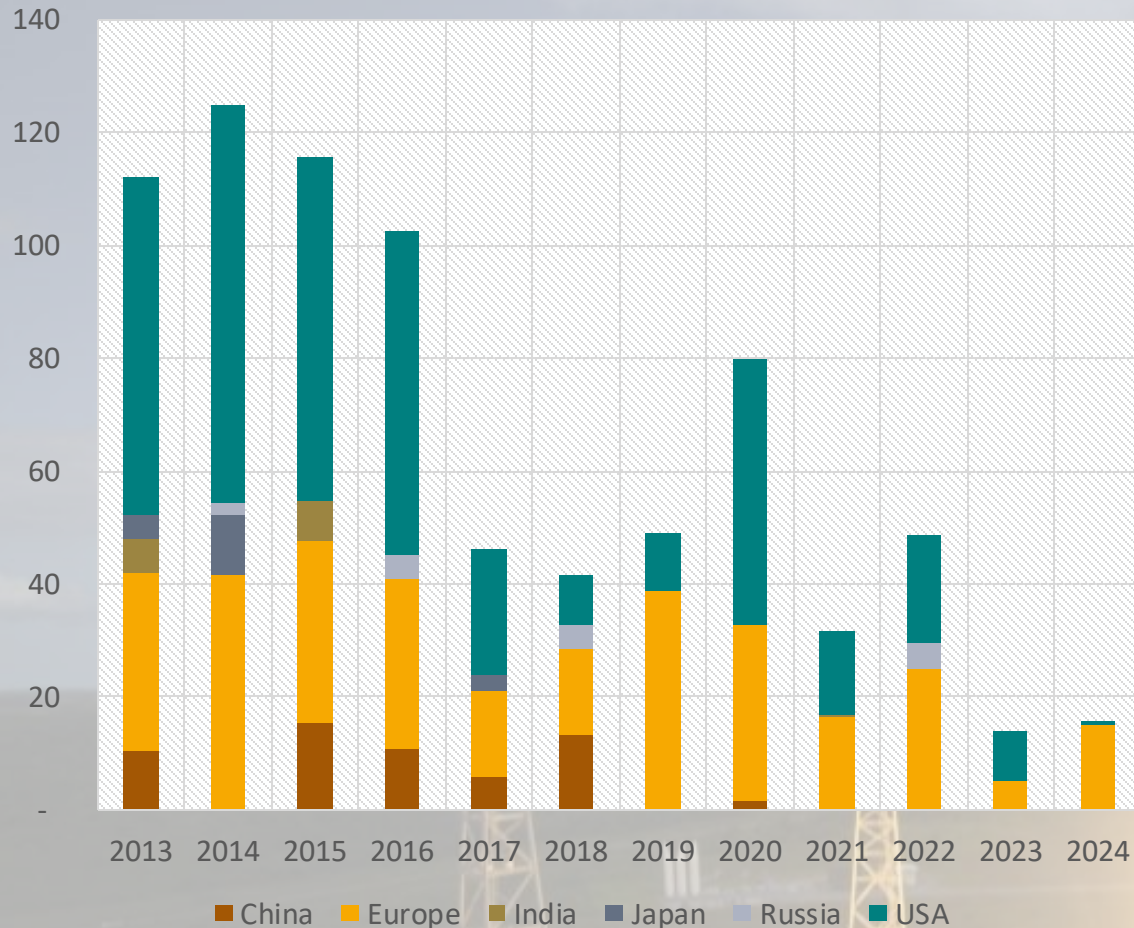

Key trends in commercial programmes

The GEO "commercial" segment

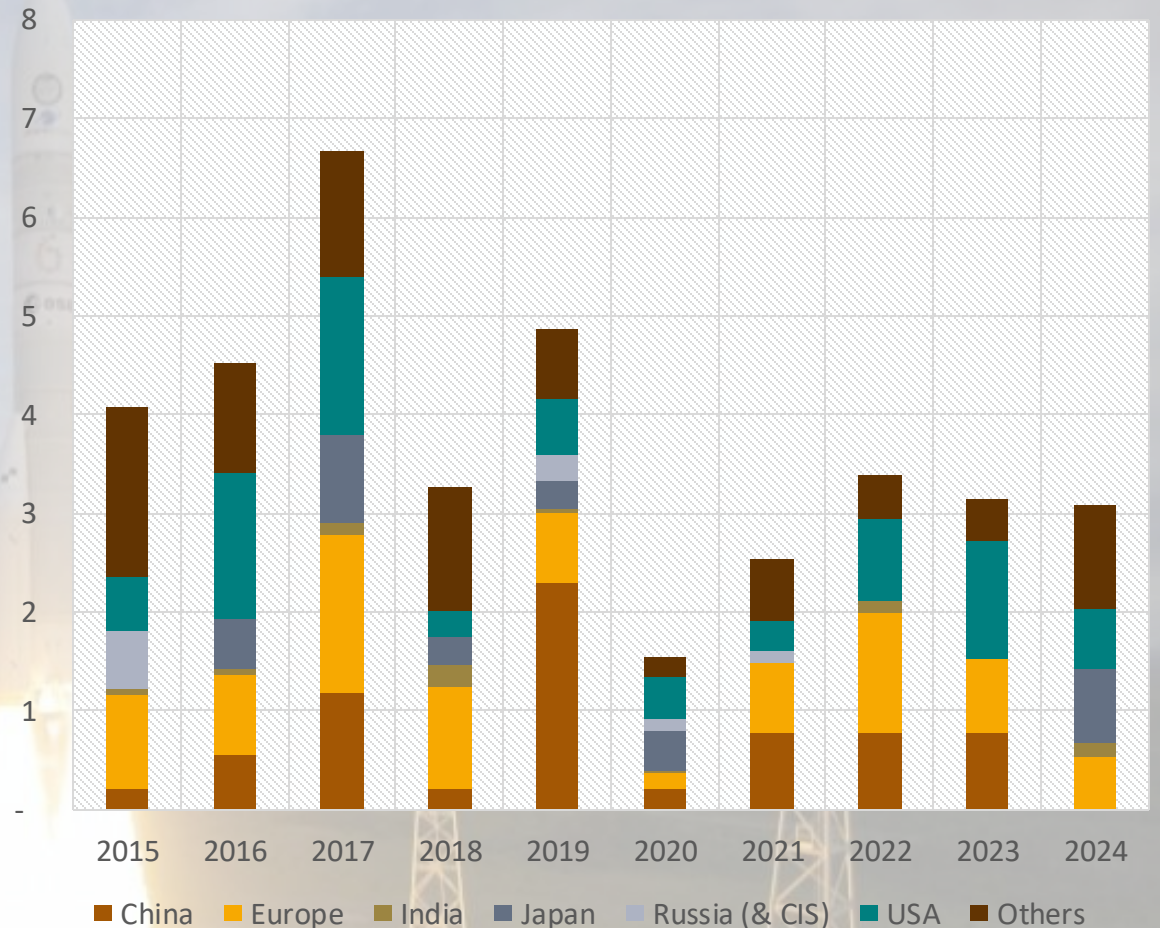

GEO "commercial" orders by year (mass)

by supplier region/country

GEO "commercial" market (B\$)

Value at launch date, by customer region

European space budgets

Consolidated

European Consolidated Space (upstream) Budget 2024

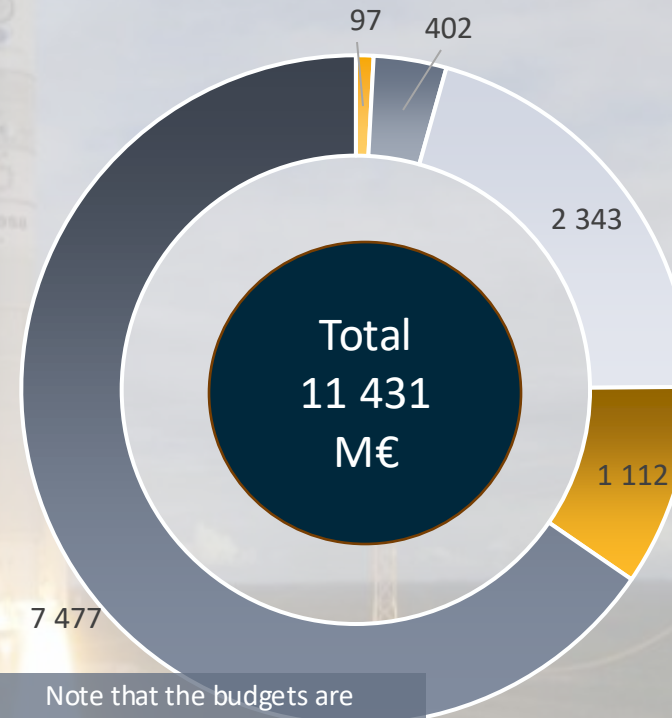

By source M€

Note that only EU 'upstream' budget is included in these figures. In particular EU budgets for H2020 downstream market development and Galileo/Copernicus operations, or for large ground telescopes are not included.

- National space budgets
- EU Space budget

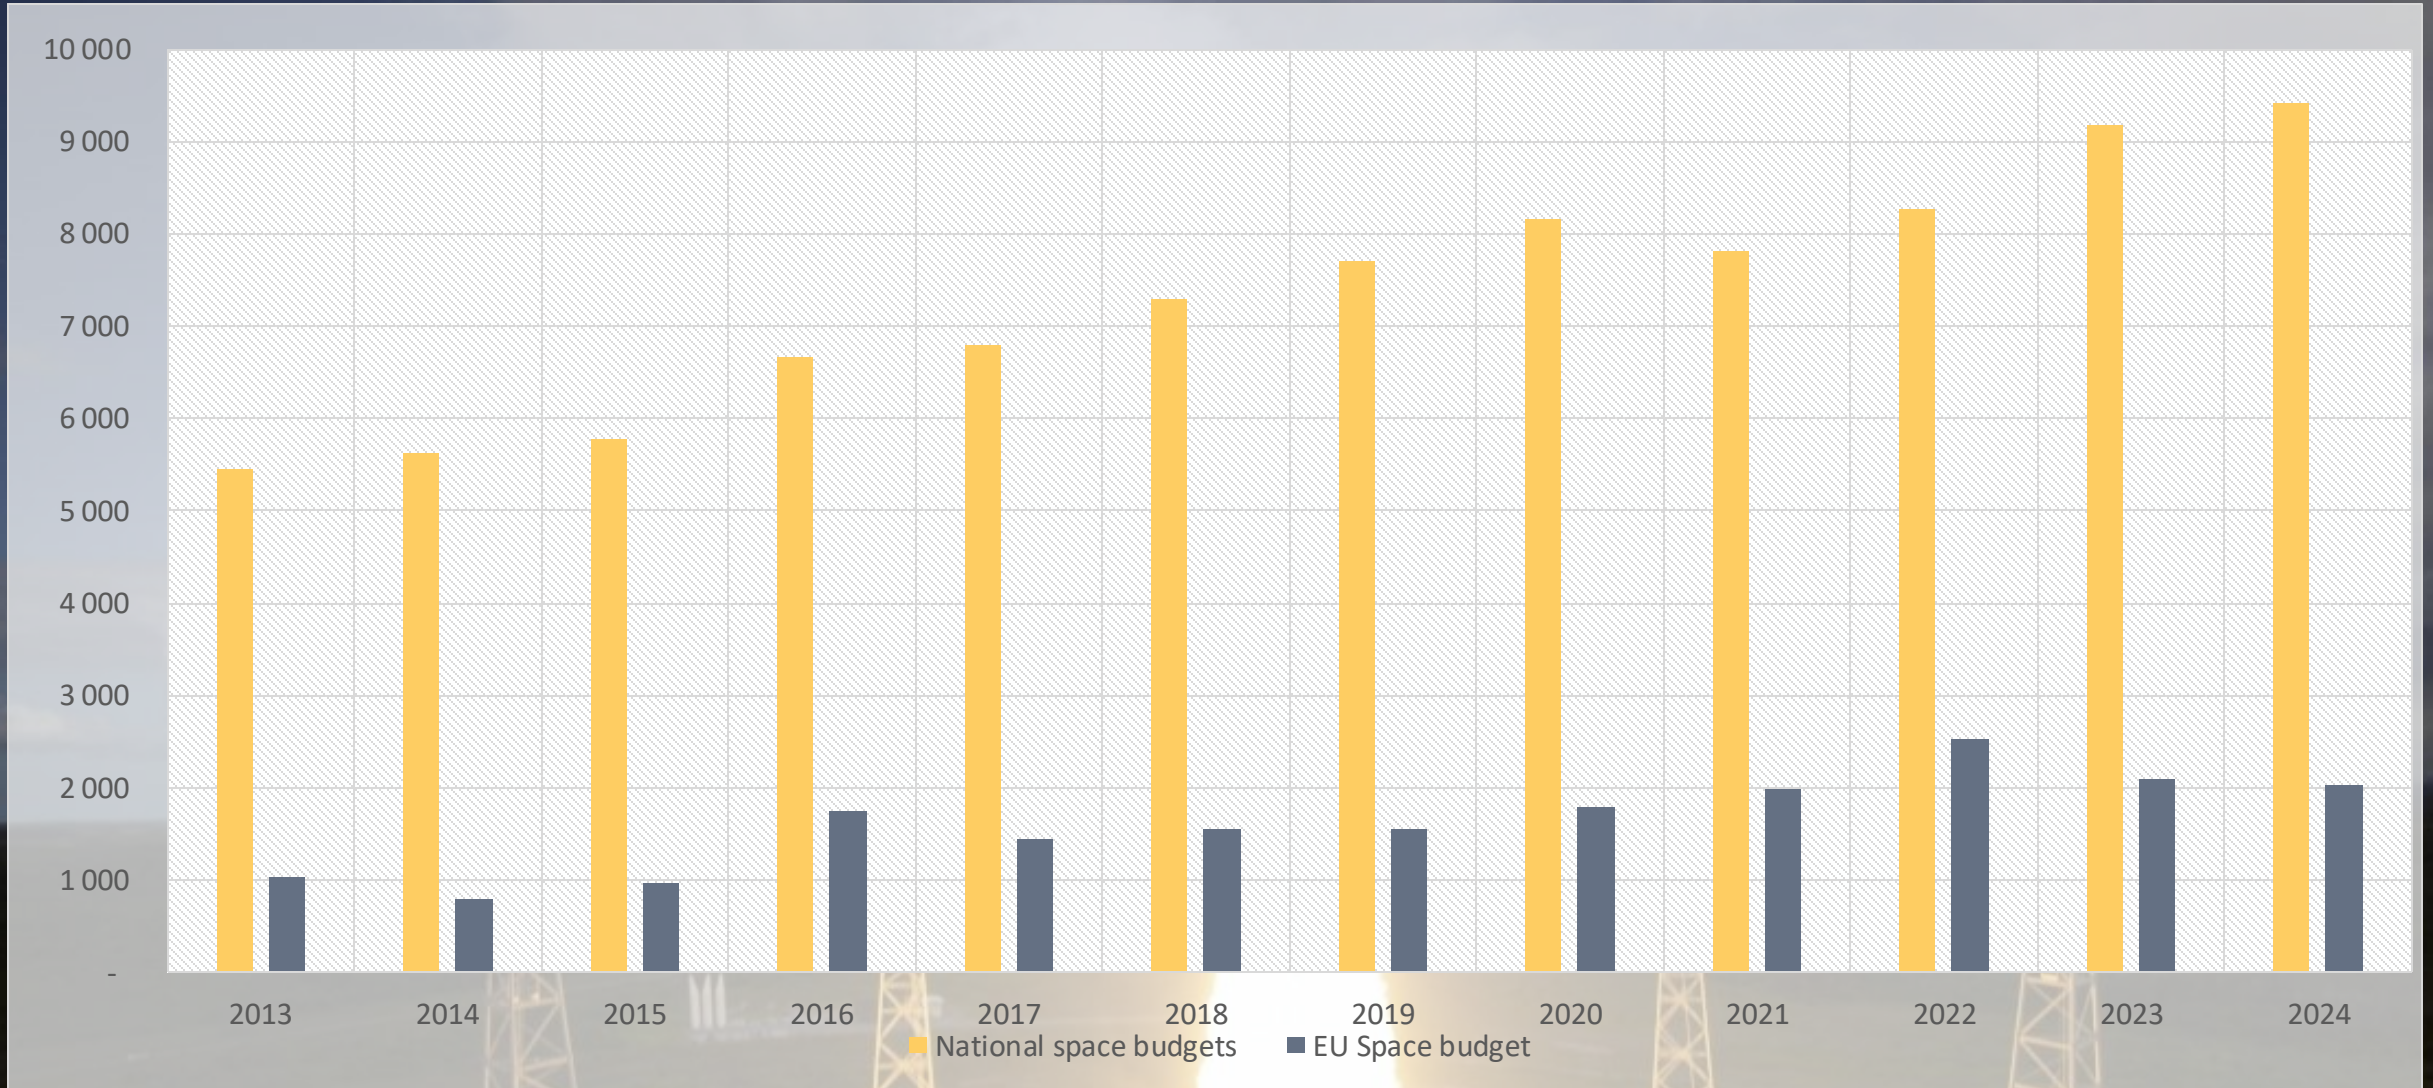

By implementing entity M€

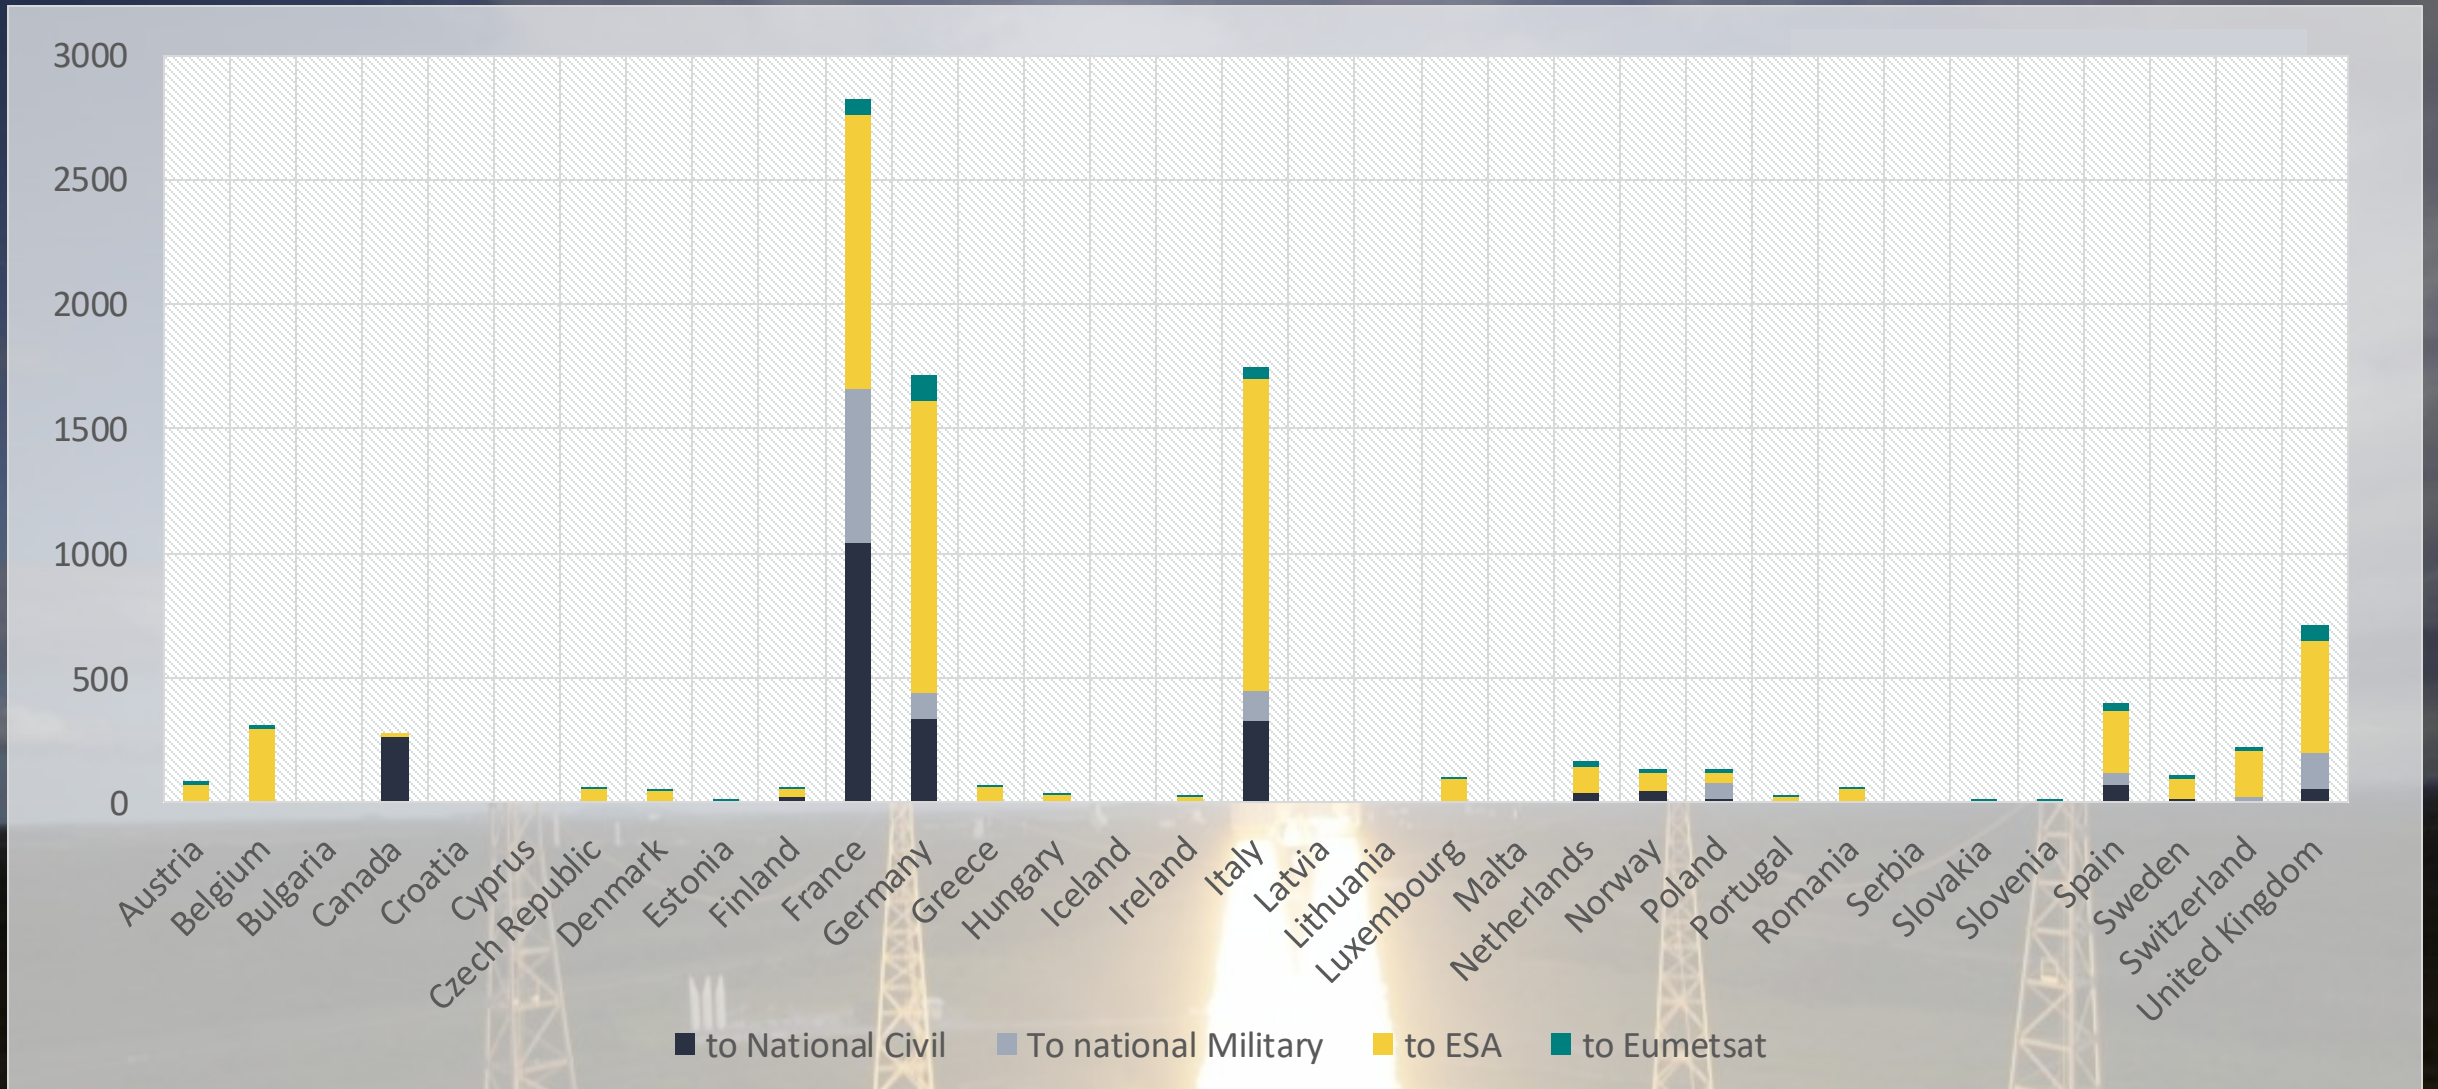

Note that the budgets are consolidated, e.g. budget delegated by ESA to CNES & DLR are included in the shares managed at national level

- Managed by EU
- Managed by Eumetsat
- Managed by National entities (civil)
- Managed by National entities (mil)
- Managed by ESA

Industry segments
dynamics

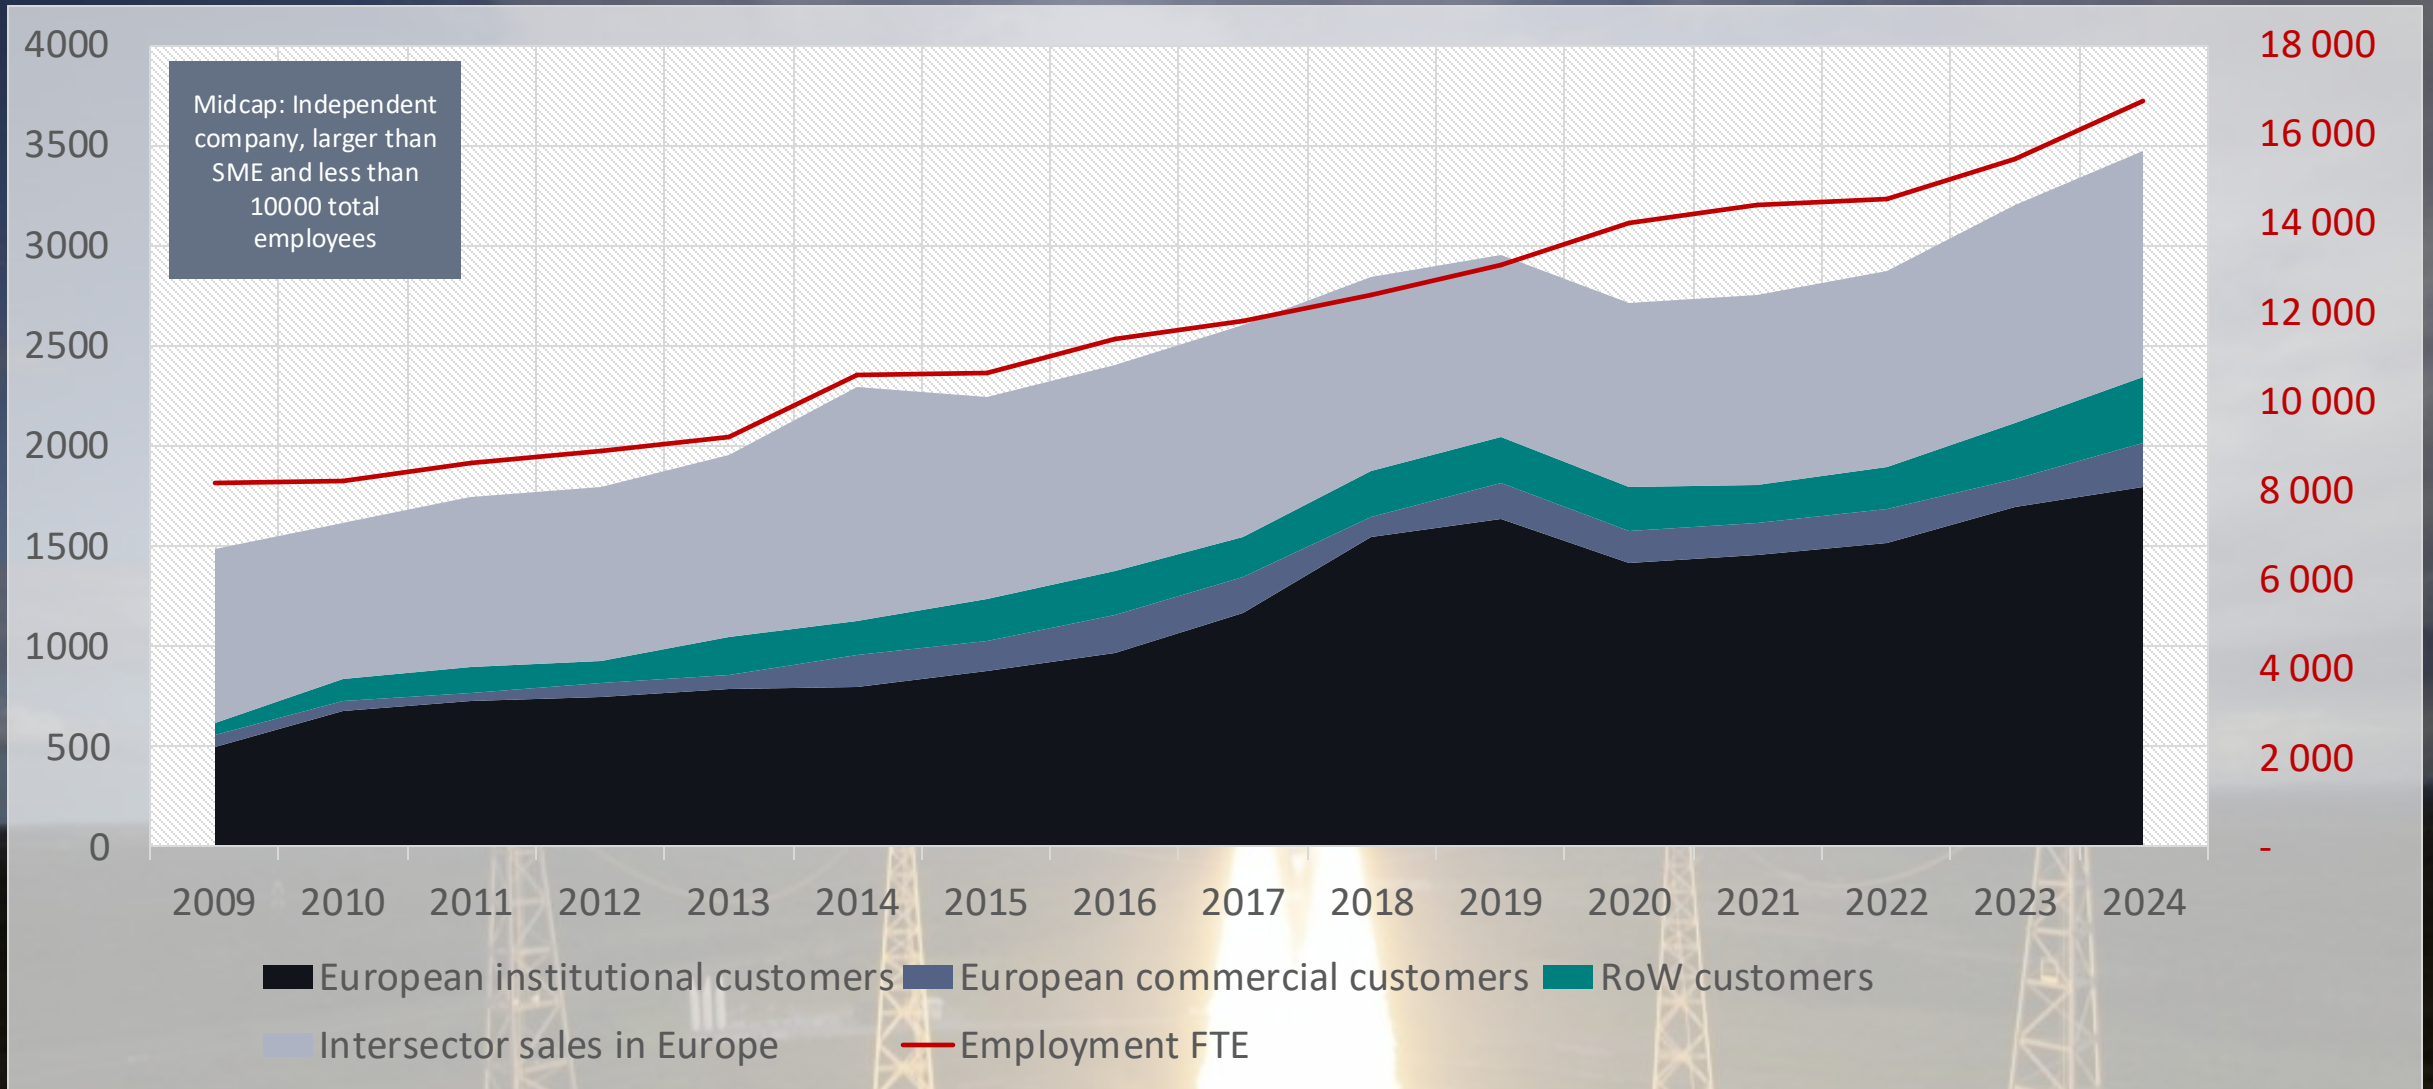

Large Groups evolution profile

total sales (M€ left) and employment (FTE – right) – definition: more than 10000 FTE at corporate level

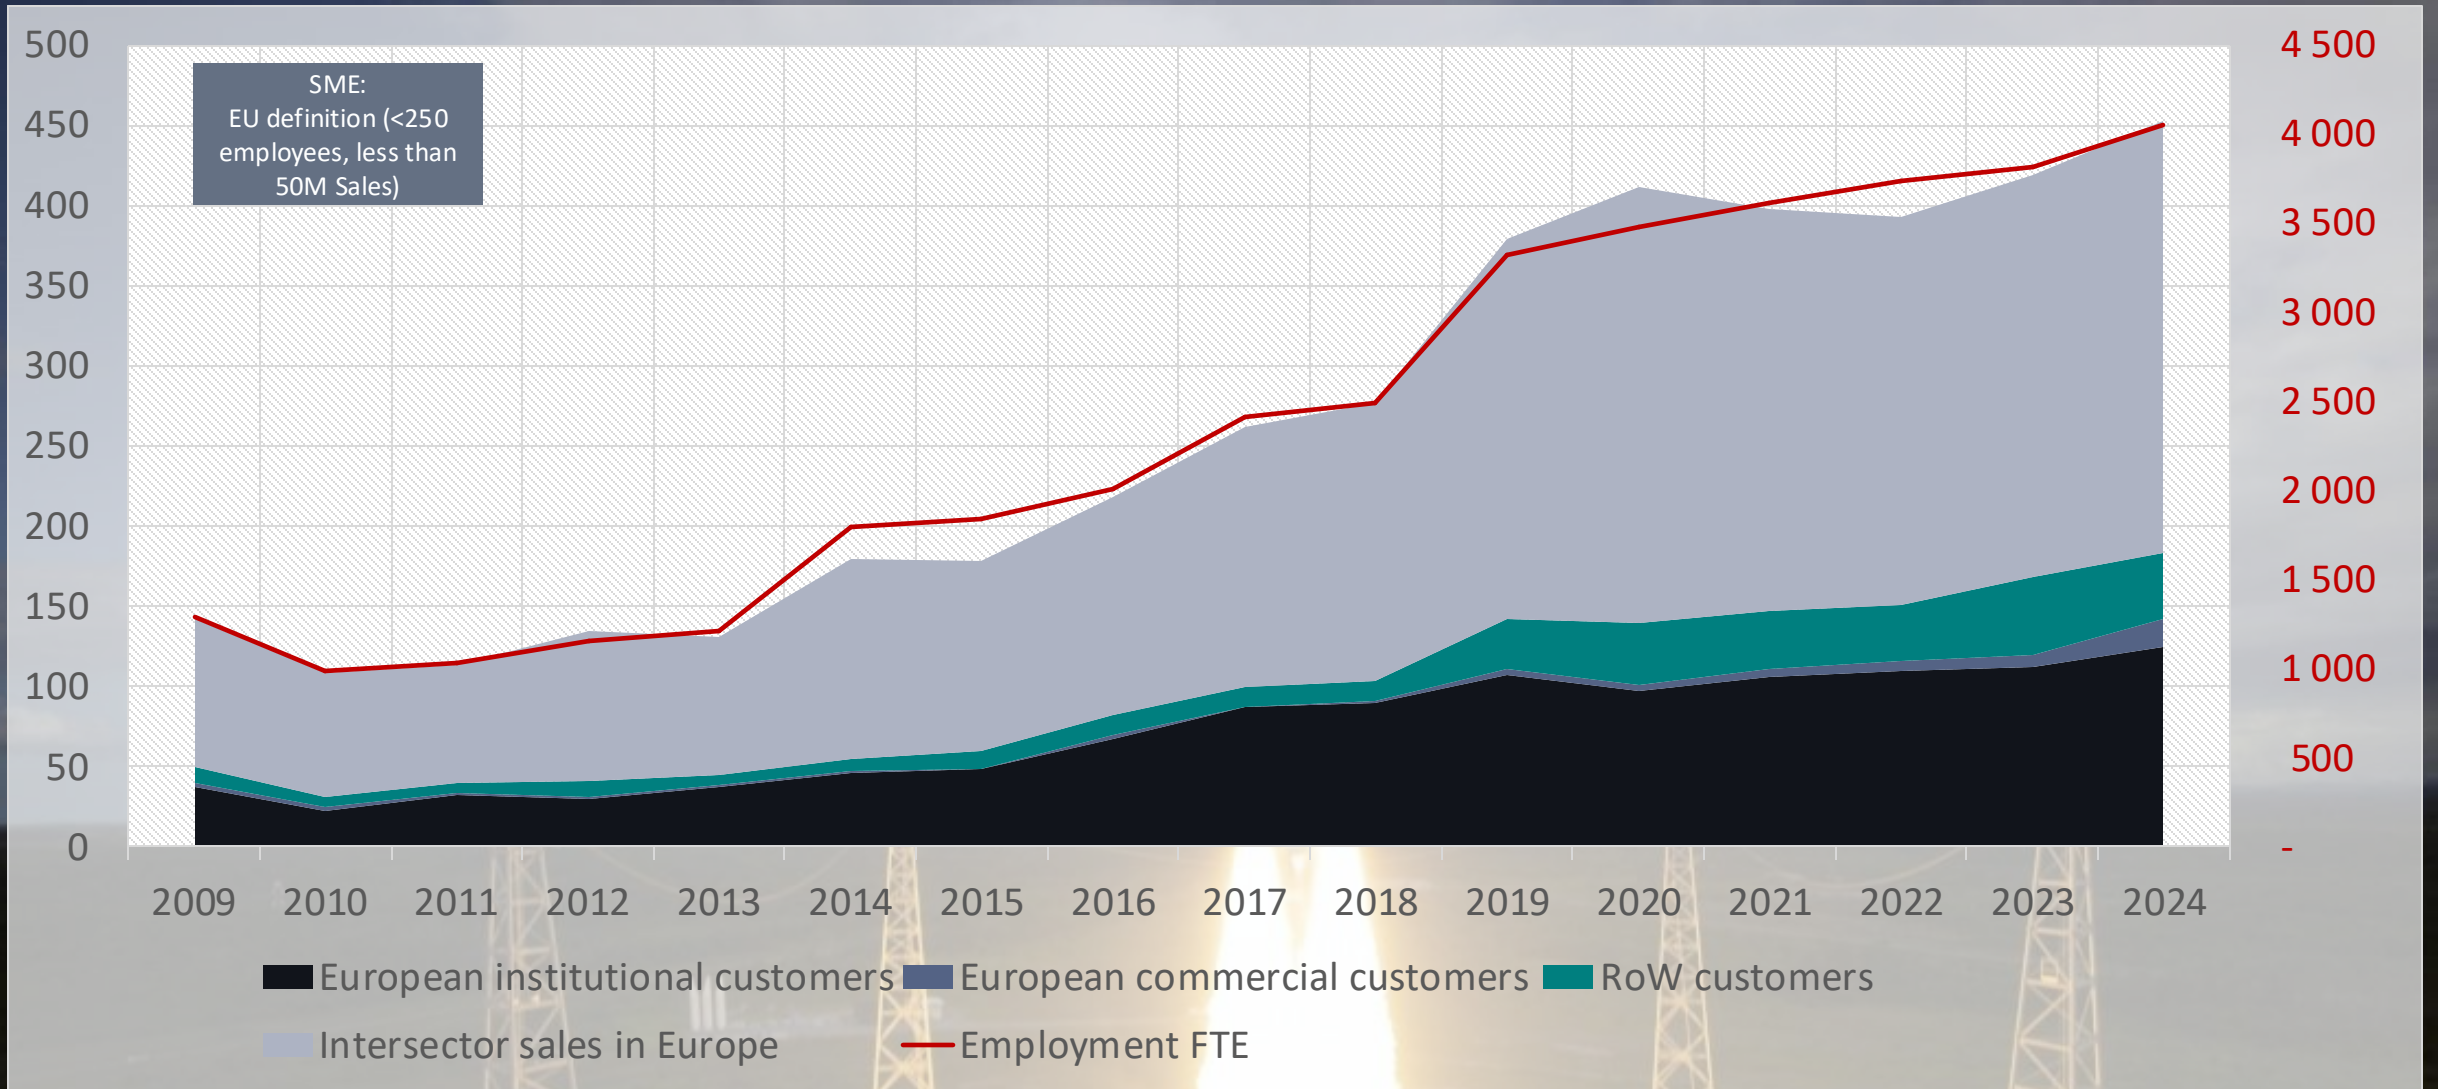

Midcaps evolution profile

total sales (M€ left) and employment (FTE – right) – definition: between 250 and 10000 FTE, independently owned

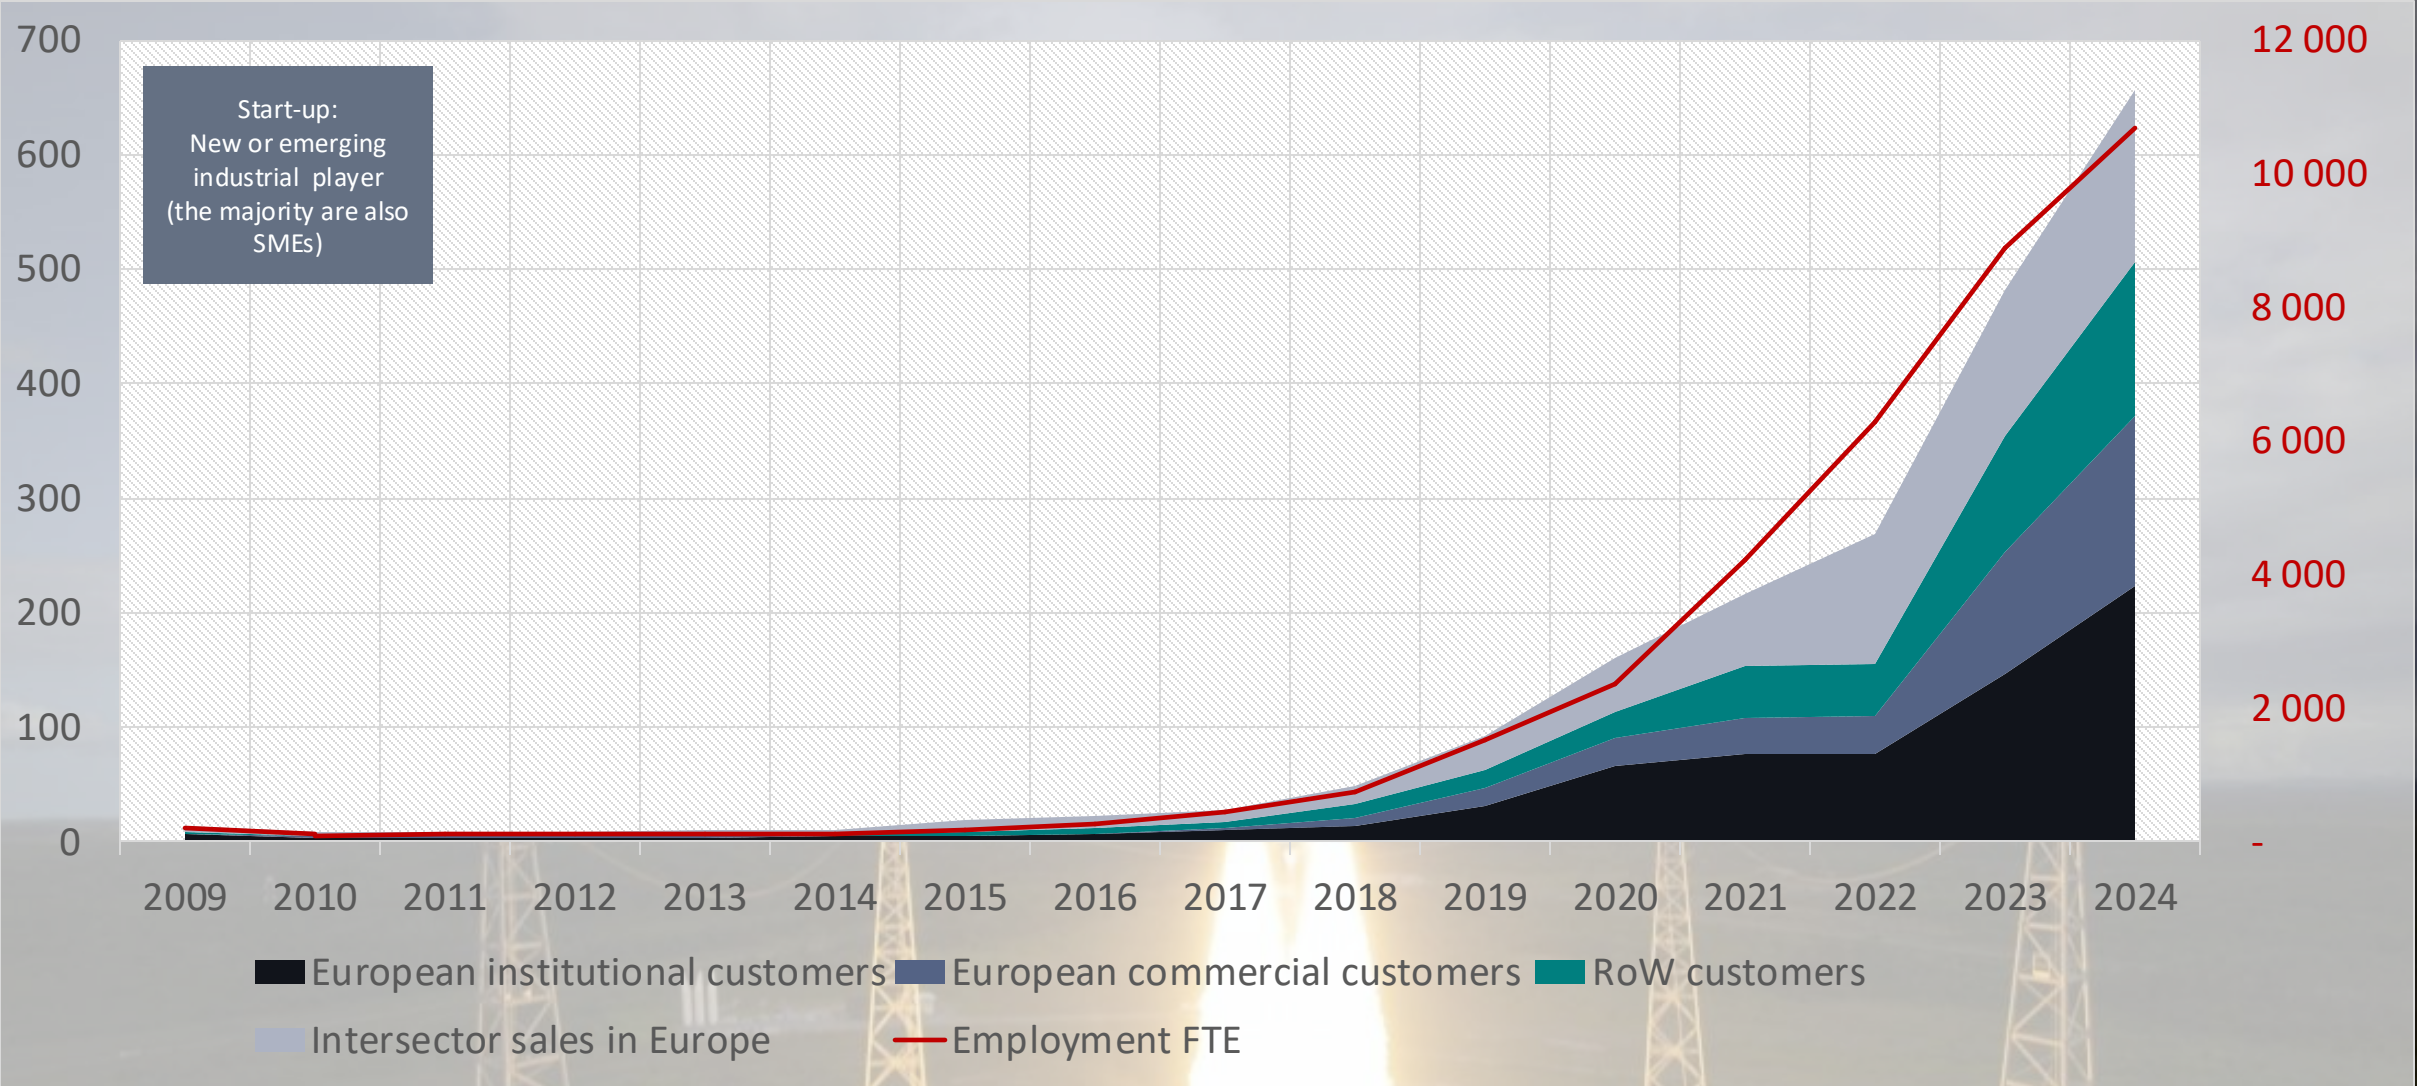

'Legacy' SMEs evolution profile

total sales (M€ left) and employment (FTE – right) – definition less than 250 FTE – independently owned

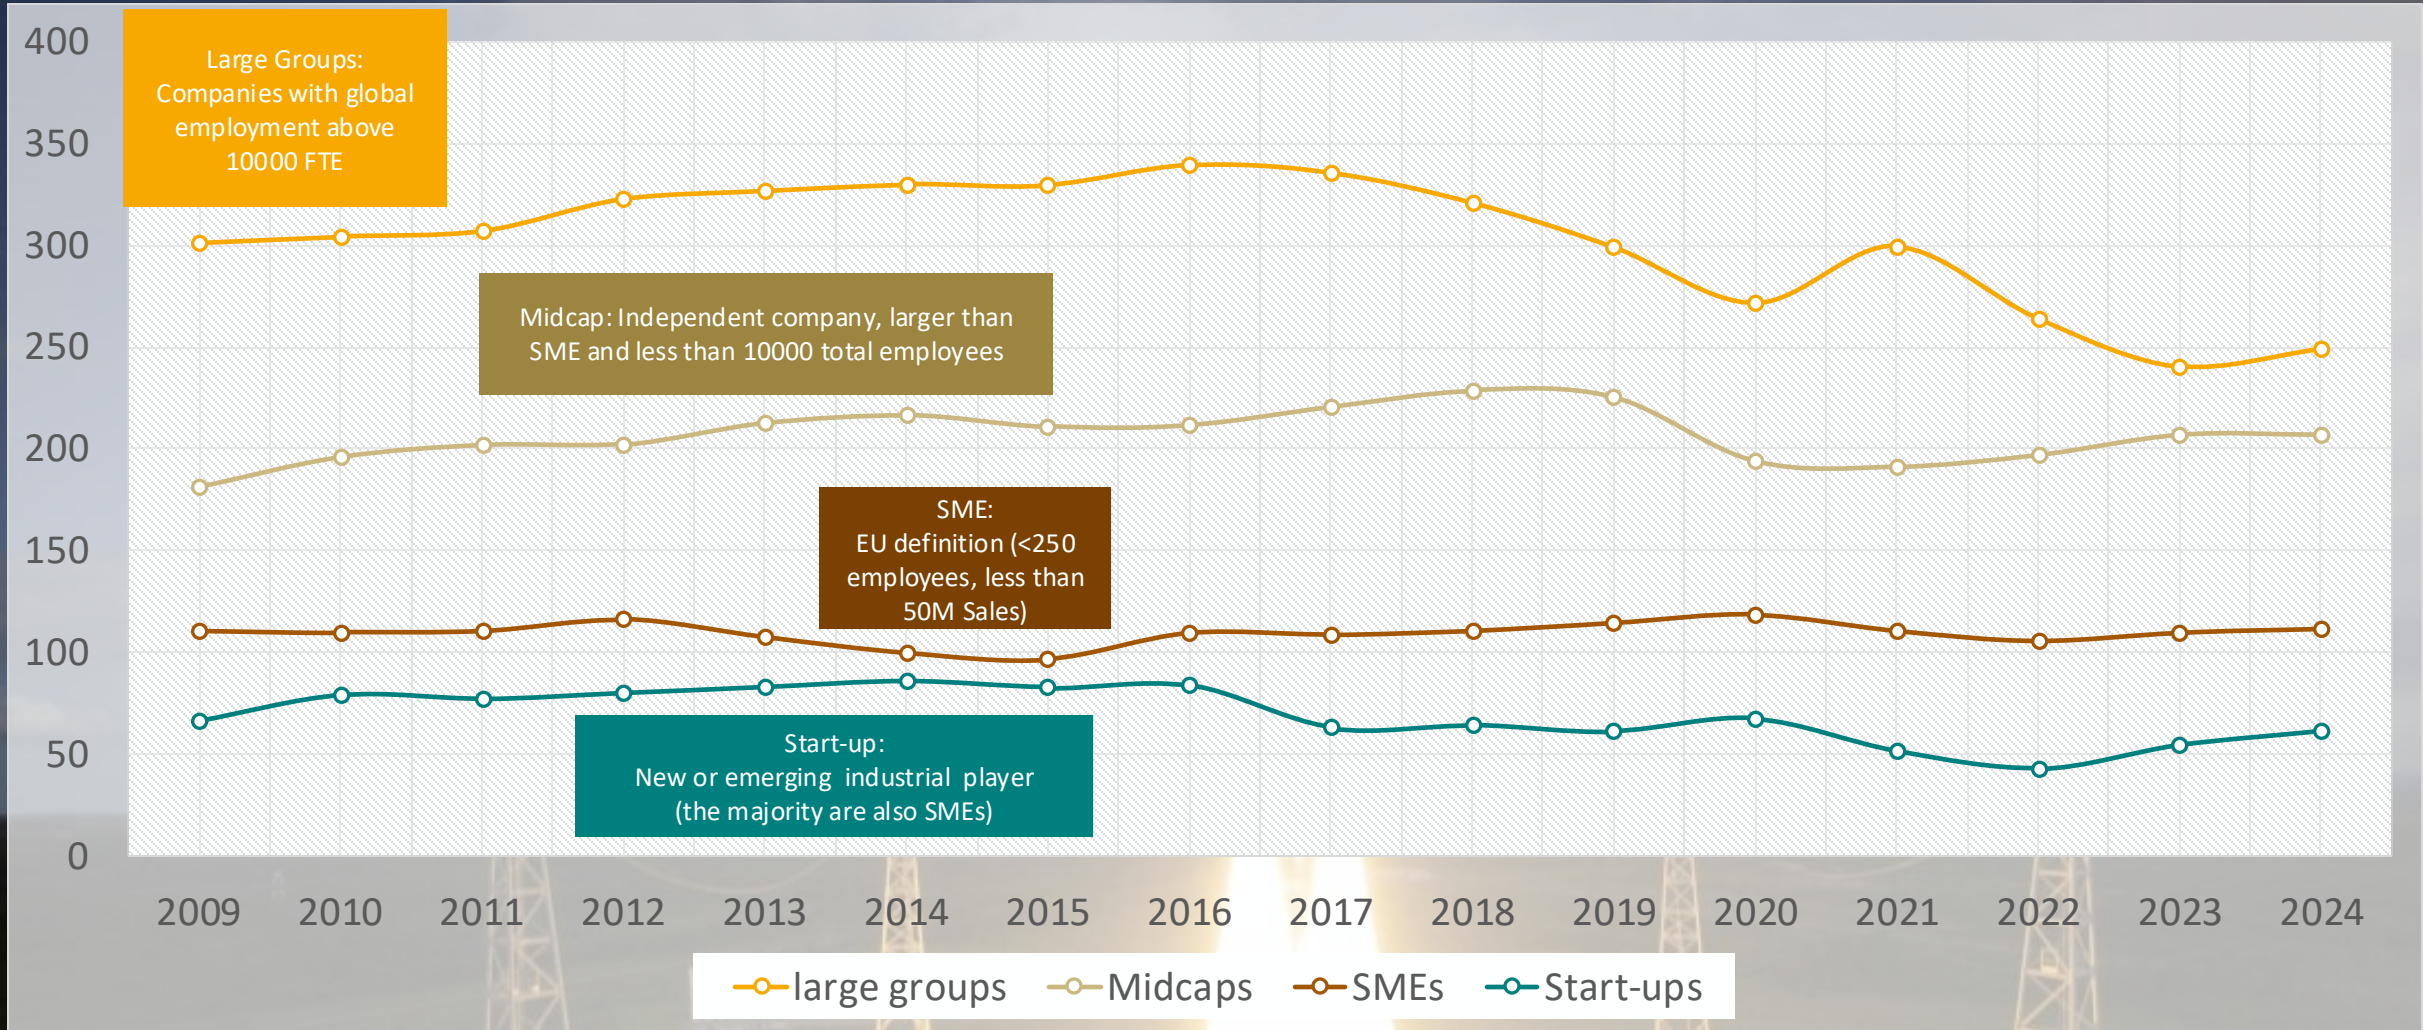

Start-ups evolution profile

total sales (M€ left) and employment (FTE – right) – Company created after 2000, low maturity, funded by PE/VC

Evolution of apparent worker productivity

by industry segment
in k€/FTE
